## **Inclusive searches for SUSY using the razor variables in CMS**

*Tuesday, July 5, 2016 2:20 PM (20 minutes)*

We present the latest SUSY search results using the razor kinematic variables in CMS. An inclusive strategy is adopted using multijet events with zero or one lepton, categorized in the number jets and b-tags, which is sensitive to a wide variety of SUSY scenarios. Results are interpreted in terms of limits of gluino pair production decaying to stops, sbottoms, and squarks, as well as squark pair production.
