# CONTENTS

- ❖ TPC design overview
- ❖ Field cage and central cathode plane
- ❖ TPC readout chamber (ROC)
- ❖ Front-End electronics (FEE)
- ❖ TPC laser calibration
- ❖ Gas system
- ❖ Cooling system
- ❖ Conclusion

# The requirements on TPC

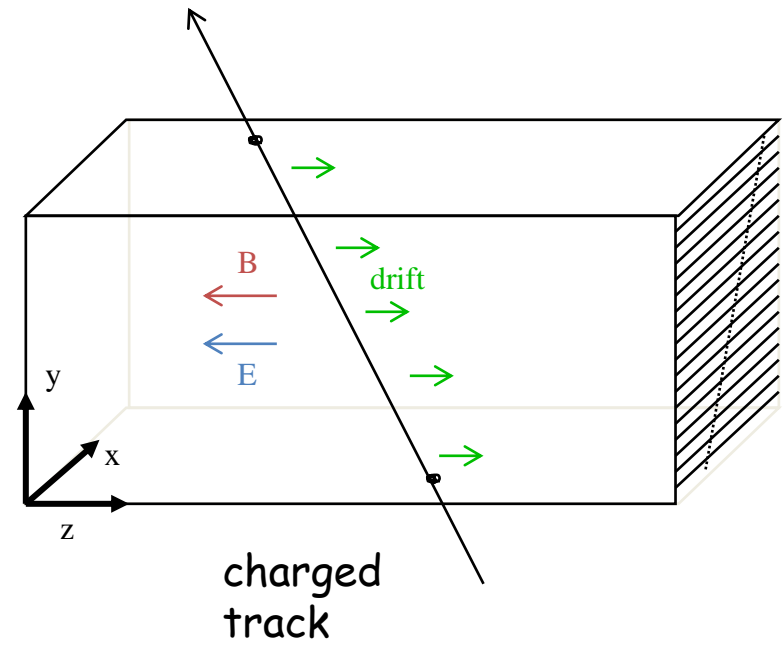

- efficient tracking up to pseudorapidity region  $|\eta|=1.2$
- the momentum resolution for charge particles  $\sim 2\%$  at the transverse momentum of 300 MeV/c
- the two-track resolution has to be about 1 cm
- a dE/dx resolution better than 8% is desirable for hadron and lepton identification

A design luminosity -  $10^{27} \text{ cm}^{-2} \text{ s}^{-1}$  for Au+Au collisions  
Interaction rate  $\sim 7 \text{ kHz}$

# Time Projection Chamber Design

- Track points recorded in 3-D ( $x, y, z$ )
- Particle Identification by  $dE/dx$
- Large track densities possible

- Only gas in active volume, small amount of material
- Long drift ( $\sim 1.5$  m) therefore
  - slow detector ( $\sim 30 \mu s$ )
  - no impurities in gas
  - uniform E-field
  - strong & uniform B-field

# 3-D coordinates

- Z coordinate from drift time
  - X,Y coordinates from pads
- Amplitude on ith pad

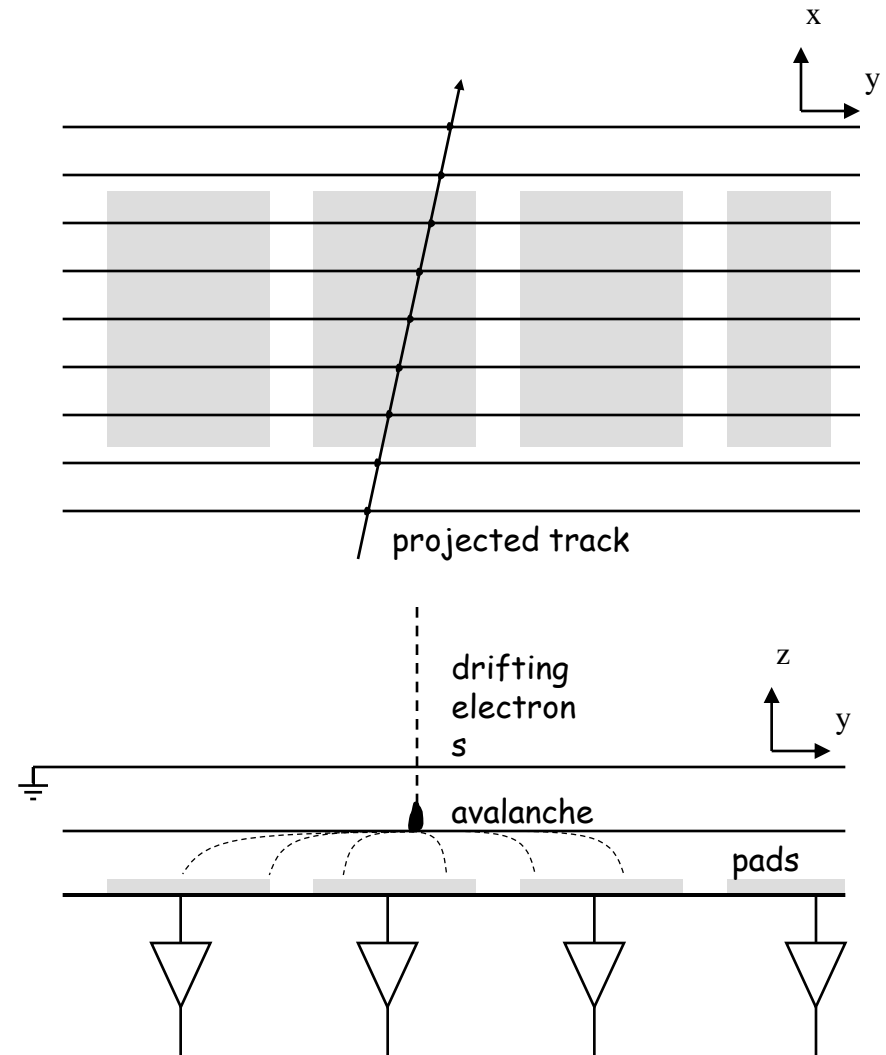

$$A_i = Ae^{-(y-y_i)^2/2\sigma_{prw}^2}$$

$y$  avalanche position

$y_i$  position of center of ith pad

$\sigma_{prw}$  pad response width

- Measure  $A_i$
- Invert equation to get  $y$

# Basic parameters of the TPC:

TPC length – 340cm  
Outer radius – 140cm  
Drift volume outer radius – 133cm  
Inner radius – 27cm,  
Drift volume inner radius – 34cm  
Length of drift volume – 170cm  
Electric field strength – 140V/cm  
Magnetic field strength – 0.5 Tesla  
Drift gas – 90% Argon + 10% Methane  
Readout: 2x12 sectors (MPWC cathode pads)  
Number of pads ~ 100000  
Pad size – 5x12mm, 5x18mm

Low material budget in barrel part,  
max. transparency for forward tracking

Small distortions,  $B_r/B_z < 5 \cdot 10^{-4}$

Fig.2a. Inner view of the TPC

Fig.2b. The front view of the TPC

# Main characteristics of TPC

Корпус TPC/MPD

Item	Dimension
Length of the TPC	340cm
Outer radius of vessel	140cm
Inner radius of vessel	27 cm
Outer radius of the drift volume	133cm
Inner radius of the drift volume	34cm
Length of the drift volume	170cm (of each half)
HV electrode	Membrane at the center of the TPC
Electric field strength	~140V/cm;
Magnetic field strength	0.5 Tesla
Drift gas	90% Ar+10% Methane, Atmospheric pres. + 2 mbar
Gas amplification factor	~ 10 <sup>4</sup>
Drift velocity	5.45 cm/μs;
Drift time	< 30μs;
Temperature stability	< 0.5°C
Number of readout chambers	24 (12 per each end-plate)
Segmentation in φ	30°
Pad size	5x12mm <sup>2</sup> and 5x18mm <sup>2</sup>
Number of pads	95232
Pad raw numbers	53
Pad numbers after zero suppression	< 10%
Maximal event rate	< 7 kHz ( Lum. 10 <sup>27</sup> )
Electronics shaping time	~180 ns (FWHM)
Signal-to-noise ratio	30:1
Signal dynamical range	10 bits
Sampling rate	10 MHz
Sampling depth	310 time buckets

## Gas tight containment cylinders C1-C4 production in Russian industry

- Material : Kevlar
- Thickness: 4 mm
- Length: 3.4 m
- Diameter: 2.8 m
- Deformation in operational position is less than 100 mkm

# Uniform E-field creation system

The non uniformity of the electric field inside the sensitive TPC volume has to be not more than  $10^{-4}$  relative to nominal value (140V/cm P10 gas mixture)

# TPC Readout

## Readout Chambers

The wire chamber sectors ( $30^\circ$  in azimuth) are mounted on each side of cylinder, on the end-cap wheels. In total - 24 chambers.

The overall area to be instrumented is  $\sim 8,0 \text{ m}^2$ . The chambers will be conventional **multiwire proportional chambers with cathode pad readout**. To keep the occupancy as low as possible and to ensure the necessary  $dE/dx$  and position resolution, there will be  $\sim 100\,000$  readout pads with two different sizes varying from  $0.5 \text{ cm}^2$  near the inner radius to  $1.0 \text{ cm}^2$  near the outer radius.

# TPC SIMULATION (pad sizes)

Allison and Cobb relation

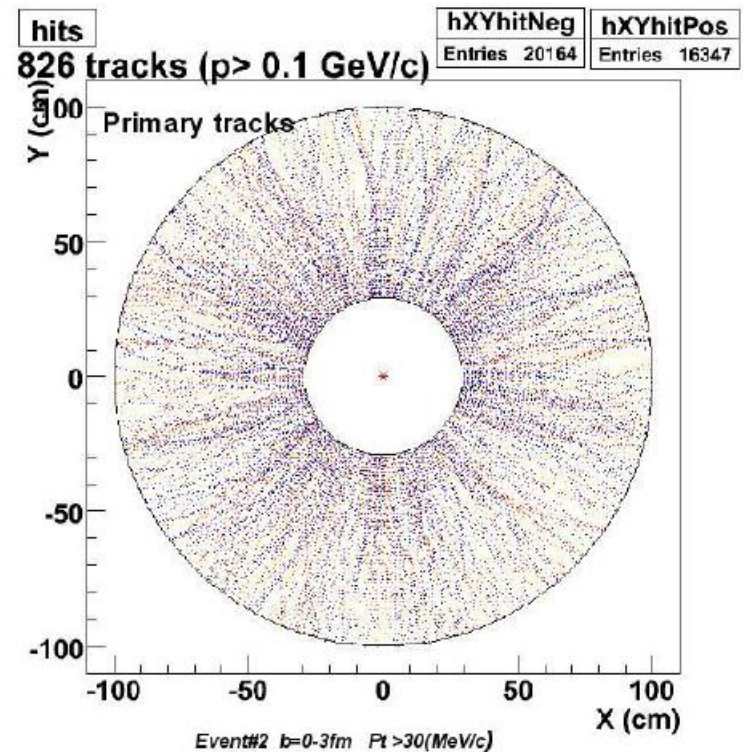

$$\frac{\Delta dE/dx}{dE/dx} = \frac{0.96}{2.35} N^{-0.46} l^{-0.32}$$

$dE/dx \sim 7\%$   $\longleftrightarrow$  number  $N = 40$  of pad rows  
 $l = 1.2$  cm the plength

16% tracks occupy the about 10 cm area  
around the inner field cage wall  $\longleftarrow$

At least 41 rows of 12mm length has to be in the pad plane area

central  $Au + Au$  collision  
at  $\sqrt{s}_{NN} = 9 GeV$

# Readout chamber

## Structure of readout chamber:

- three wire planes
- pad plane
- insulation plate
- trapezoidal aluminum frame

## Pad structure

- pad raw number 53
- rectangle shape
- small pads  $5 \times 12 \text{ mm}^2$
- large pads  $5 \times 18 \text{ mm}^2$

## Wires structure

- anode wire pitch 3 mm
- cathode wire pitch 1,5 mm
- gate wire pitch 1 mm
- wires gap 3 mm

13

# ROC chamber and Pad-plane status

## Design of Read-Out Chamber (ROC) is defined

### Structure of Readout Chamber:

- three wire planes
- pad plane
- insulation plate
- trapezoidal aluminum frame

### Wire structure:

- anode wire ( $\text{Ø}=25\ \mu\text{m}$ ) pitch - 3 mm
- cathode wire ( $\text{Ø}=75\ \mu\text{m}$ ) pitch - 1.5 mm
- gate wire ( $\text{Ø}=75\ \mu\text{m}$ ) pitch - 1 mm
- wires gap - 3 mm

### Pads:

- rectangular shape
- 27 rows of pad with size  $5 \times 12\ \text{mm}^2$  at inner area
- 26 rows of pad with size  $5 \times 18\ \text{mm}^2$  at outer area

Two prototypes of read-out chamber were constructed and tested

Serial read-out chamber (ROC) is designed and two prototypes are under construction

Pad-plane printed circuit board is developed and given into manufacture

# TPC Laser Calibration System

In order to minimize the error in the absolute position measurement by TPC, it is necessary to take into account both static and time-dependent distortions in the drift path of the ionization cloud. A calibration system that can reproduce fiducial tracks is needed to monitor the TPC performance. This calibration system will be based on the UV laser.

There are 224 laser beams whole TPCin

## Status of TPC calibration system

**2 lasers are ordered**

## Set of mirrors

**300 mirrors are ordered**

**Prototyping and design – in progress**

# TPC cooling system

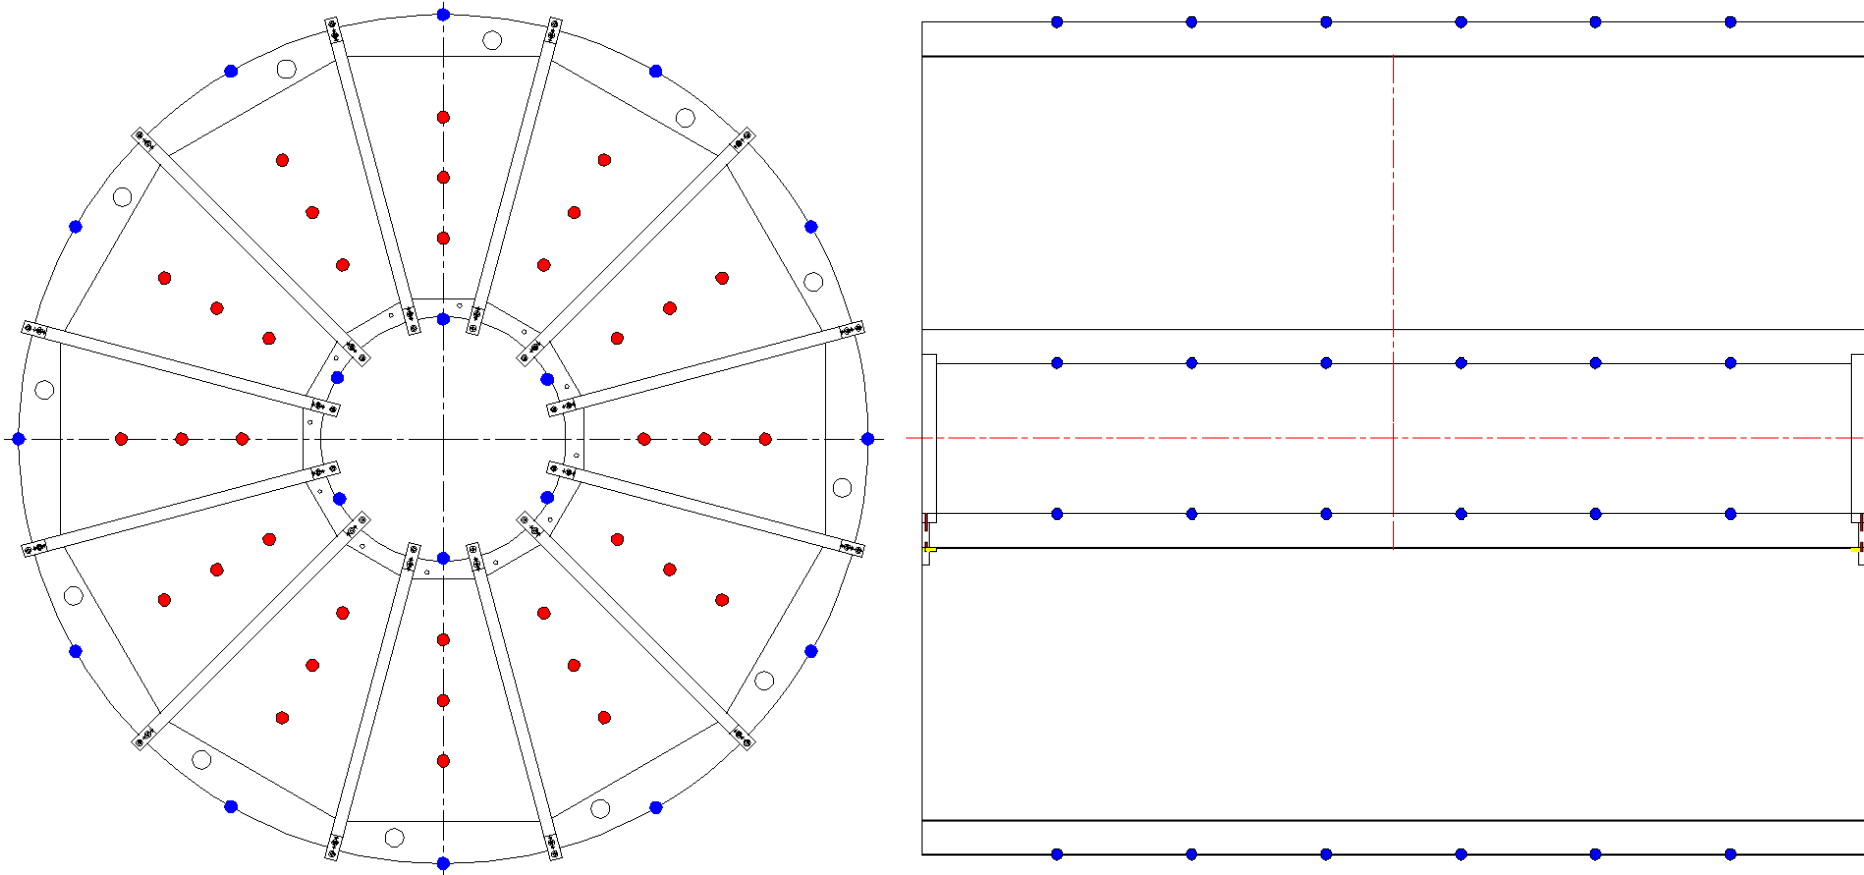

## Number of Circuits:

- FECC: 12+12
- ROC Covers: 2+2
- Therm screen: 12+6
- Resistor rods: 2+4

Total: 52

# Temperature Monitoring

Sensors: **blue** – on the field cage, **red** on the chambers

Location	Outer Field cage	Inner Field cage	ROC modules
Number of the sensors	72	36	72

## Status design of cooling system

**Weight ~ 2.7 kG**

**Weight+H<sub>2</sub>O ~ 3 kG**

**48 cooling plates (48\*3) ~ 144 kG**

**Option 1: 48 cooling plates + steel supports (144+14\*22) ~ 452 kG**

**Option 2: 48 cooling plates + Al supports (144+14\*7.3) ~ 246 kG**

in progress ...

## TPC gas system

### Requirements

90%Ar+10%CH<sub>4</sub>

The drift volume is 18500 liters,  
the insulating gaps – 4800 liters

Hermetically closed-loop gas circulation system

Dryer and purification in return line

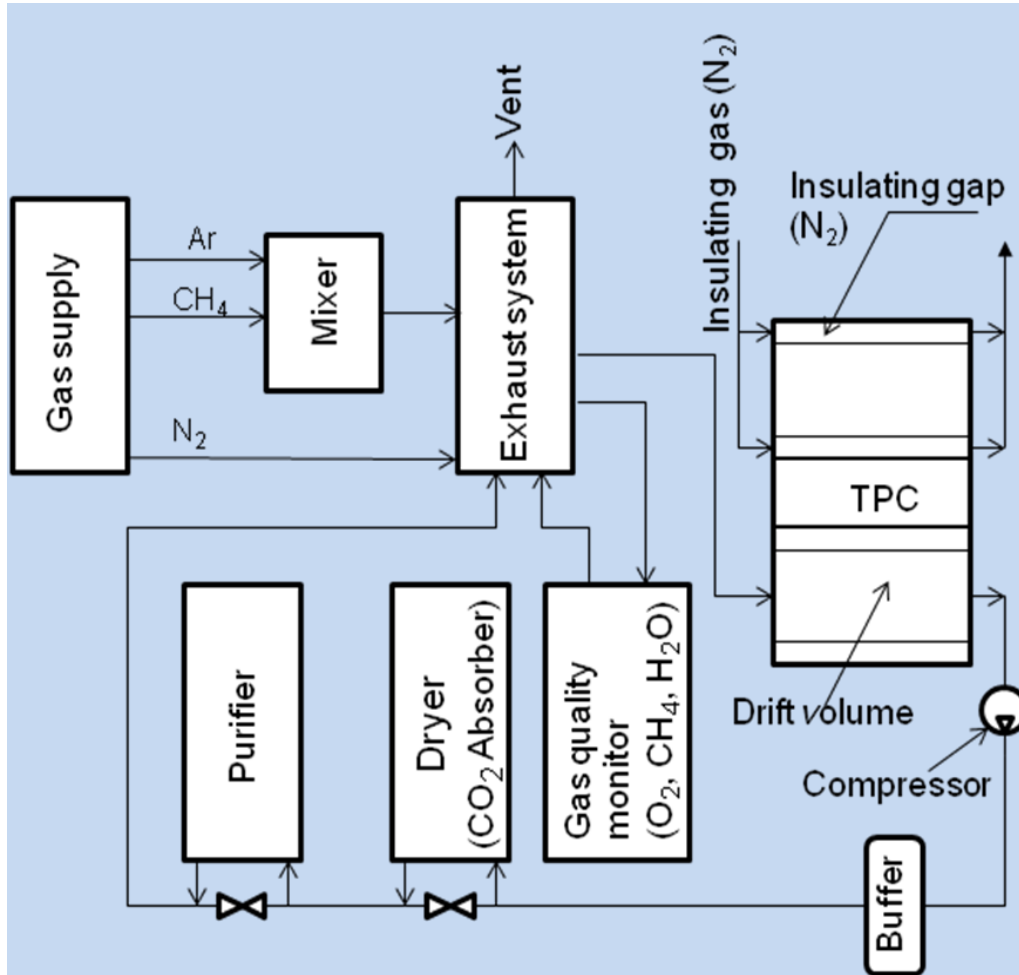

Continuous monitoring of gas gain and drift  
velocity – gas chromatograph

Gas mixture temperature control - 0.5 K

Internal TPC overpressure – not more 2 mbar

Recirculation flow - 3.8 m<sup>3</sup>/h

## TPC gas system

Gas mixture	Ar + 10%CH <sub>4</sub>
TPC gas flow, nominal	200 l/min
TPC overpressure	(2.0 ± 0.1)mBar
O <sub>2</sub> admixture	20 ppm
H <sub>2</sub> O admixture	10 ppm
External loop, refresh gas rate	30 l/min
Fresh part of gas mixture add to external loop, range	(0-50) l/min
TPC isolating gas	N <sub>2</sub>
N <sub>2</sub> gas flow	(5-20) l/min

Gas system technical design report is complete, the system is under construction. It will be ready in 2017.

## TPC data rates

**Trigger rate - N=7 kHz**

**hit size per track - 3.0 kB**

- *signal shape - 5 byte/ch*  
(3 ADC\*10bit + time(10bit))
- *per 1 "hit" on track - 5byte/ch\* 6 pads*  
= 30 byte
- *per track - 30x53(R-koop.) = 1.6 kByte*  
up to 30x(53R+75φ)= 3.9 kByte

**max rate per half TPC: 15 GB/sec**

3.0\*10<sup>3</sup> Byte x 500 tracks = 1.5 MB per ~  
100 μsec

**TPC total data rate: 30 GB/sec**

**TPC data rate:**

max - **30 GB/sec** (1000 tracks per 100 μsec)

average - **10 GB/sec** (2.5\*10<sup>6</sup> tracks/sec  
(350 tracks per 100 μsec))

**Occupancy (for 1000 tracks): ~ 10 %**

**ROC chamber:**

Each **RCU output link speed**

Max	- 11.2 Gbit/sec	
average	- 4 Gbit/sec	- OK!

**FE-RCU (62 pc FE per ROC chamber):**

Each **FE-RCU link speed:**

max	- 180 Mbit/sec	- OK!
average	- 65 Mbit/sec	

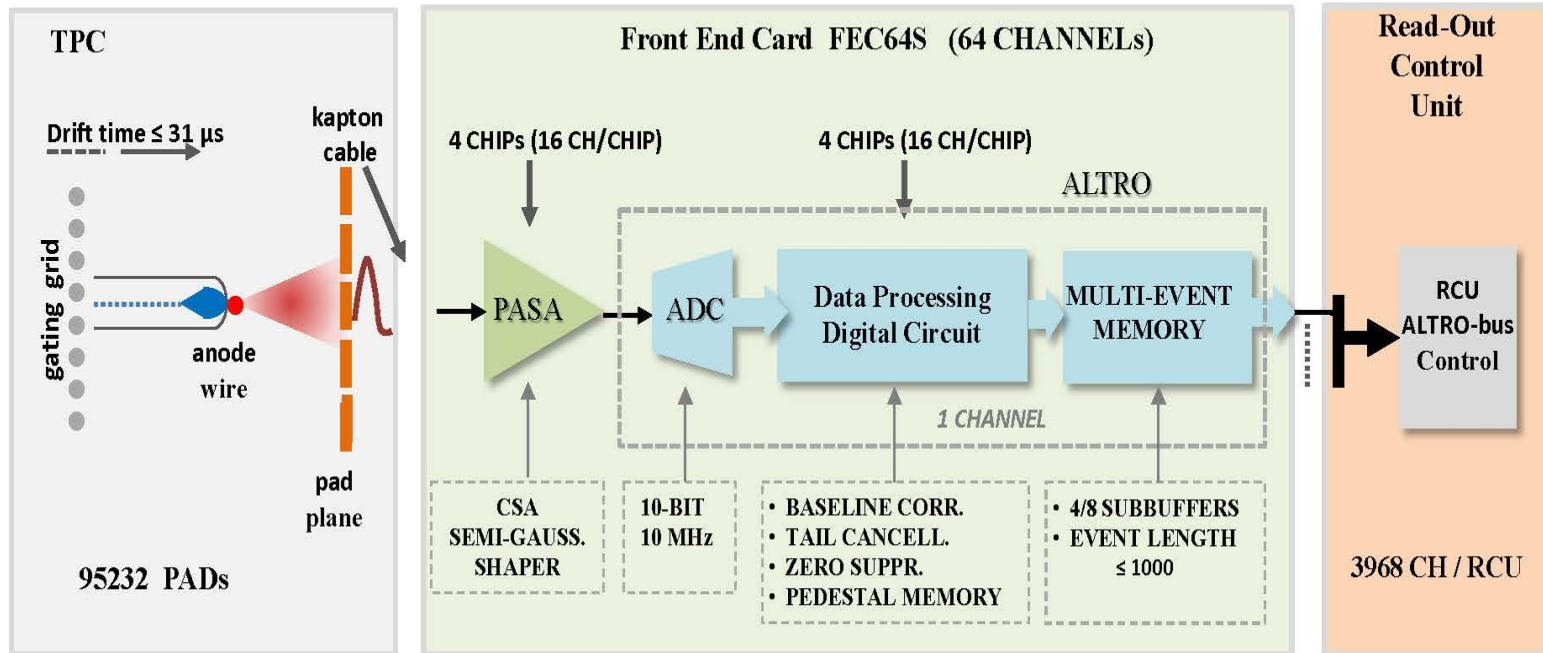

## TPC electronics

Parameter	Value
Total number of channels	<b>95 232</b>
Signal to noise ratio, S/N	<b>&gt; 30:1 @ MIP (<math>\sigma_{\text{noise}} &lt; 1000e^-</math>)</b>
Dynamic Range	<b>1000 (10 bits sampling ADC)</b>
Shaping time	<b>190 ns</b>
Sampling	<b>10 MHz</b>
Tail cancellation	<b>&lt; 1% (after 1 <math>\mu</math>s)</b>
Zero-suppression	<b>up to 90%</b>
Bandwidth	<b>up to 10 GB/s @ TPC</b>
Power consumption	<b>100 mW/ch</b>

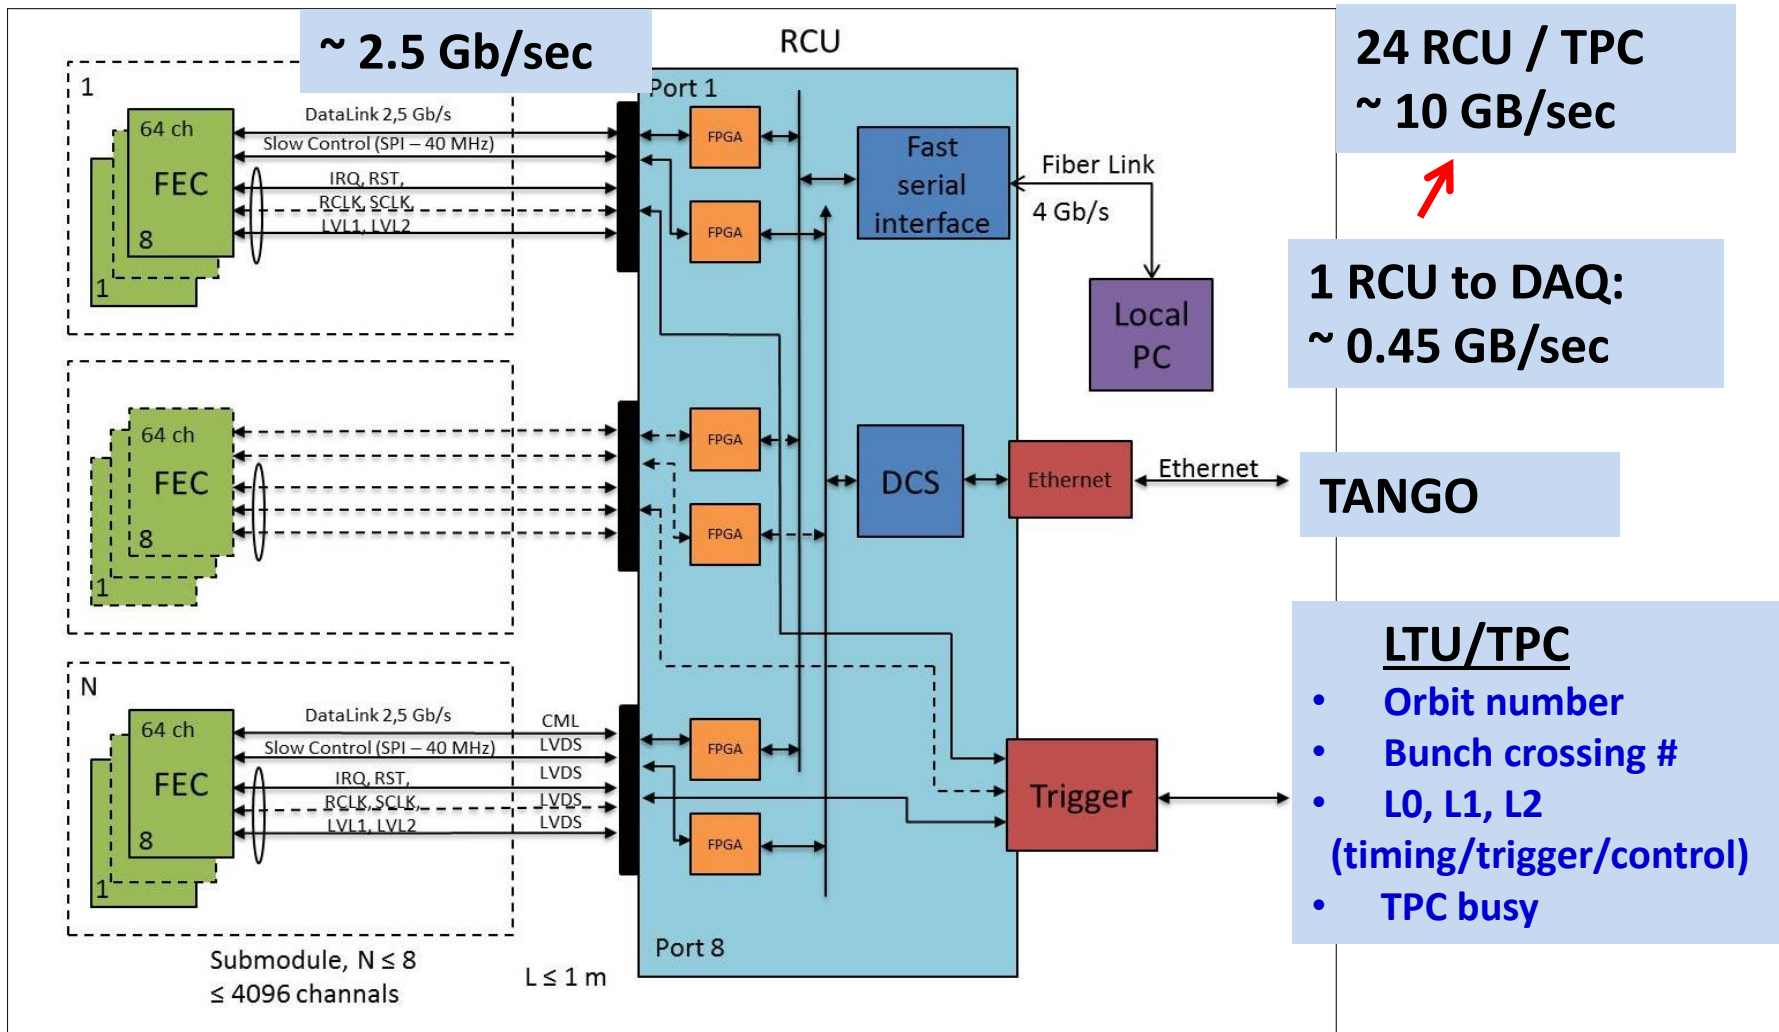

# FE electronics based on PASA and ALTRO ASICs

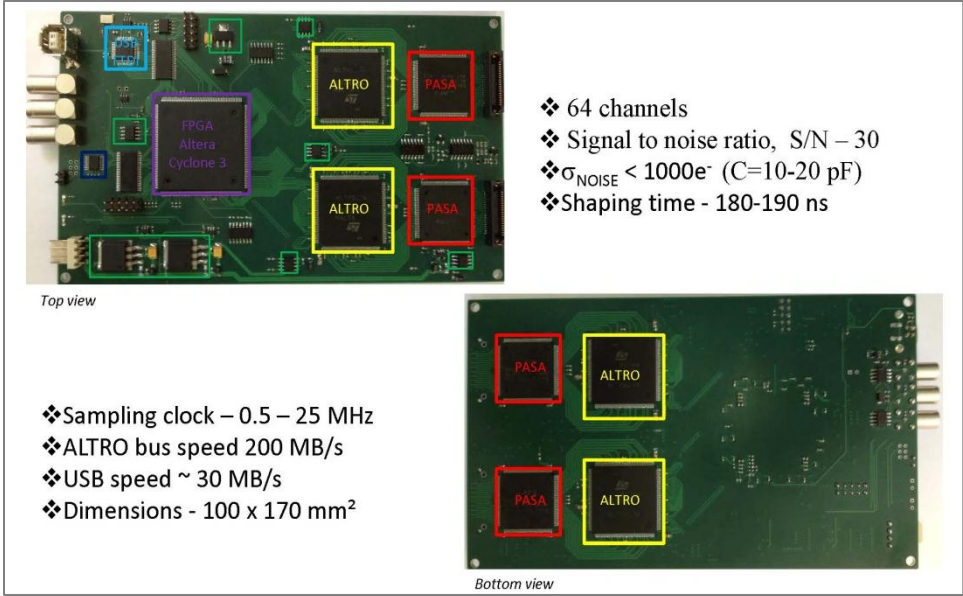

## The ALTRO single channel data processing and transport chain

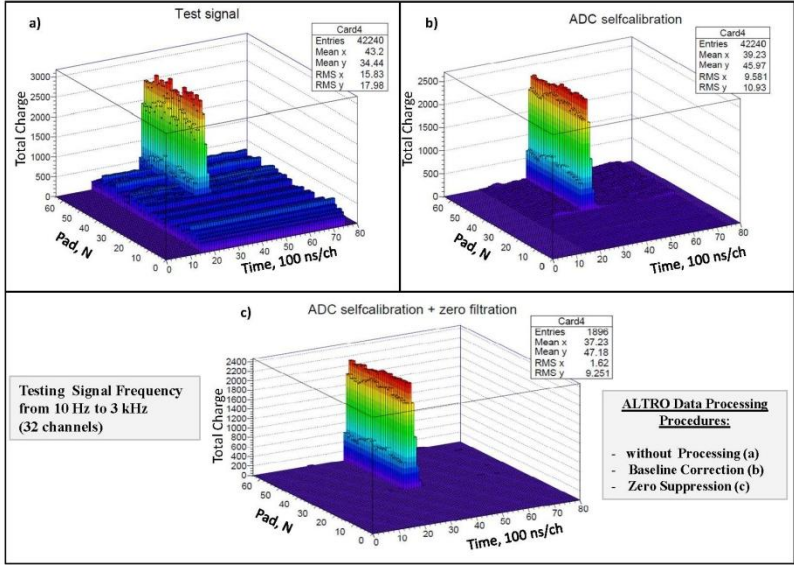

# RCU controller

# FE card prototype (FEC-64)

event N 0, pad N 16

## FEE status

- ✓ **TPC FE electronics concept - done**
- ✓ **Engineering & Construction** of the 64-Channel Front-End Card based on the 16-channel analog-to-digital **ASIC ALTRO (Prototype FEC64) - done**
- ✓ **FEC64 Software** for study ASIC ALTRO functioning and debugging of FPGA digital logics - **done**
- ✓ **Testing of some FEC64** with Pulse Generator and on the TPC-prototype Readout Chamber with Fe-55 - **complete**
- ✓ **Engineering & Construction and Test** of the **serial** 64-Channel Front-End Card **FEC64S - in progress**
- ✓ **Engineering** of the Readout Controller **RCU - in progress**
- ✓ **Creation** of the **FEC64S Testing System** based on the development kit '**Cyclone-5 SoC**' – **in progress**

# TPC assembly

Bld.217

**S = 84 m<sup>2</sup> (ISO-8-9)**  
**+ 2 rooms for equipment**

## Tools for TPC assembling

Status: under design

# ROC chamber assembly hall

## Gluing

## Wiring

## Test set up

## Soldering

## Time schedule

	Item	Date
1	Assembly TPC cylinders C1+C2	December 2015
2	TPC assembly hall ready	June 2016
3	TPC assembly (C1-C4 + HV electrode + field cage + 2 flanges)	December 2017
4	ROC chamber manufacture (26 pc)	2016 – 2017
5	Assembly ROC chamber (24pc) to TPC	Jan-June 2018
6	TPC electronics manufacture (FEC64S and RCU)	May 2018
7	Assembly FEC64S to ROC chamber	Sept– Dec 2018
8	TPC test with cosmic and laser calibration system	2018-July 2019
9	TPC transportation from Bld.217 to the MPD hall	August 2019
10	Installation TPC to MPD	Sept 2019
11	TPC gas and cooling systems assembly in the MPD hall	Jan – Sept 2019
12	TPC test inside MPD	Oct–Dec 2019 - 2020

Thank you for attention

Welcome to join us for design and experiments  
at NICA accelerator complex with MPD

# ENERGY LOSS

E = 9 GeV, 2000 events, UrQMD

**PID:** Ionization loss ( $dE/dx$ )  
**Separation:**

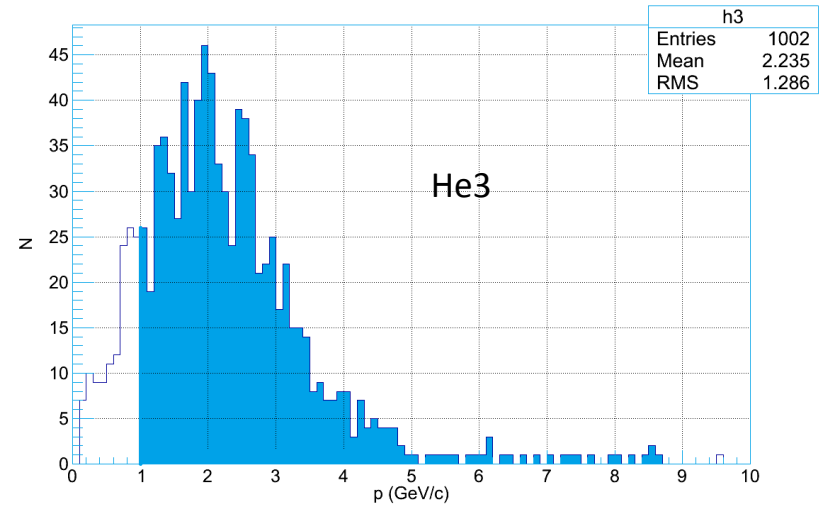

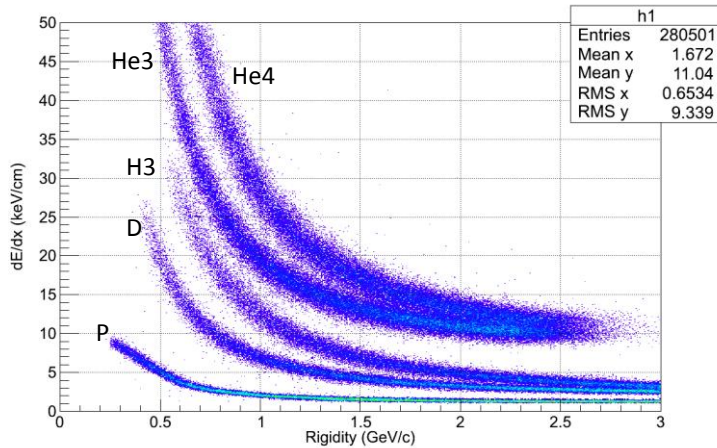

$e/h$  – 1.3..3 GeV/c

$\pi/K$  – 0.1..0.6 GeV/c

$K/p$  – 0.1..1.2 GeV/c

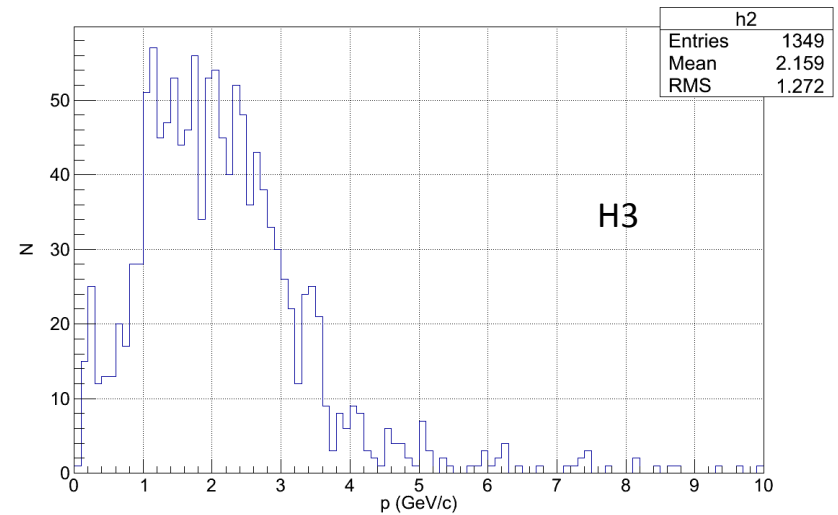

The energy loss distribution in the MPD TPC

# Light nuclei in TPC

**TPC FEE input full scale amplifier  $\sim 250$  fC**  
**It is  $\sim 30$ -40 MIP energy loss**

**QGSM Au+Au central collision**  
**9 GeV,  $b=1$ fm**

# TPC / MPD

**Two-track resolution:** The two-track resolution has to be such that HBT measurements with a resolution in relative momentum of a few ( $\sim 5$ ) MeV/c can be performed. This may require running at higher magnetic fields. Two Track resolution  $\sim 1$  cm is expected.

**Resolution  $dE/dx$ :** For hadron identification  $dE/dx$  resolution of 8% is desirable, following the experience of NA49. Depending on the final particle multiplicity this can just be reached with the current design.

For TPC MPD

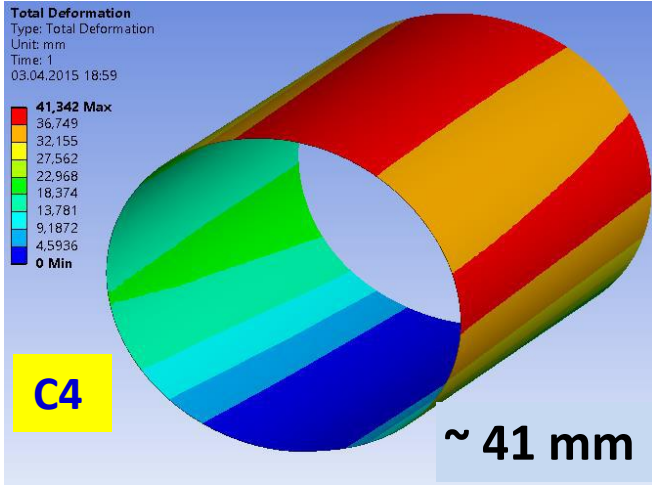

$\sim 6-7$  % of  $dE/dX$  resolution is expected

- $\pi/K$  separation to 0,7 GeV/c  
( for TPC Alone)
- $(\pi+K)/p$  to  $p \sim 1,2$  GeV/c  
( for TPC Alone)

**Figure 3.35:**  $dE/dx$  resolution as a function of the number of samples in the NA35 TPC. Sample length 4 cm, gas Ar/CH<sub>4</sub> (91/9).

# TPC deformation

**TPC assembly must be done very carefully**

# TPC assembly hall (Bld.217)

Bld.217

**S = 84 m<sup>2</sup> (ISO-8-9)**  
**+ 2 rooms for equipment**

# TPC integration to MPD (similar to *ALICE* design)

## Laser calibration system – in progress

Fig. 46. Overview of the optical elements to guide the laser beam from the laser to the entrance windows in the TPC field cage. The A side system is shown; the C side system is obtained by mirror symmetry in a vertical plane along the TPC axis.

## TPC alignment marks – not started

Figure 4.38: Reference marks distributed along the outer and inner circumference of the end-plate allow the orientation and planarity of the end-plate to be surveyed via photogrammetry.

# TPC FE integration: service wheel (SSW) – design started
