# Medipix

## Medipix family of HPDs:

- Medipix
  - Medipix2
- } Single Photon Counting
- Timepix
    - Single Photon Counting
    - Time of Arrival
    - Time over Threshold
  - Medipix3
    - SPC with Charge Summing
    - Up to 8 Energy Thresholds
    - Multiple readout modes
    - Configurable depth counters
  - Future Medipix ASICs...

Each chip contains a matrix of 256 x 256 pixels of 55  $\mu\text{m}$  pitch.

# Medipix2 and Timepix

<b>Total:</b>	<b>107</b>
<b>A</b> No dead columns:	47 44%
<b>B</b> 1 dead column:	25 23%
<b>C</b> 2 dead columns:	8 7%
<b>D</b> > 2 dead columns:	5 5%
<b>E</b> Bad DACs:	16 15%
<b>F</b> Bad Digital Test:	6 6%

# Medipix3

Medipix3: Single photon counting pixel detector

New algorithm to eliminate charge sharing.

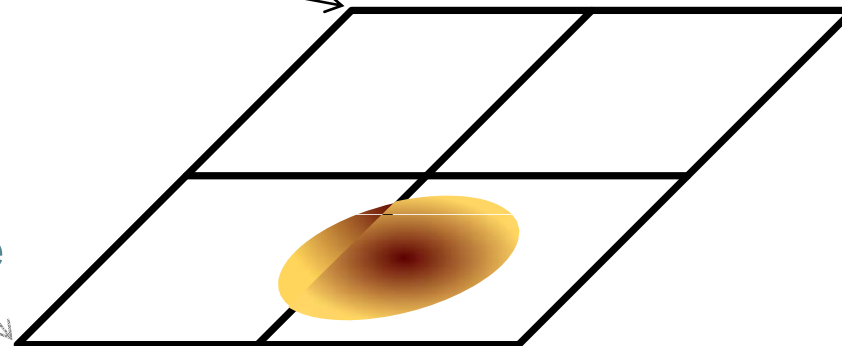

# Medipix3

Medipix3: Single photon counting pixel detector

New algorithm to eliminate charge sharing.

When charge sharing occurs, the photon may be doubly counted, and there may be distortion in the energy spectrum seen by the pixel.

# Medipix3

Medipix3: Single photon counting pixel detector

New algorithm to eliminate charge sharing.

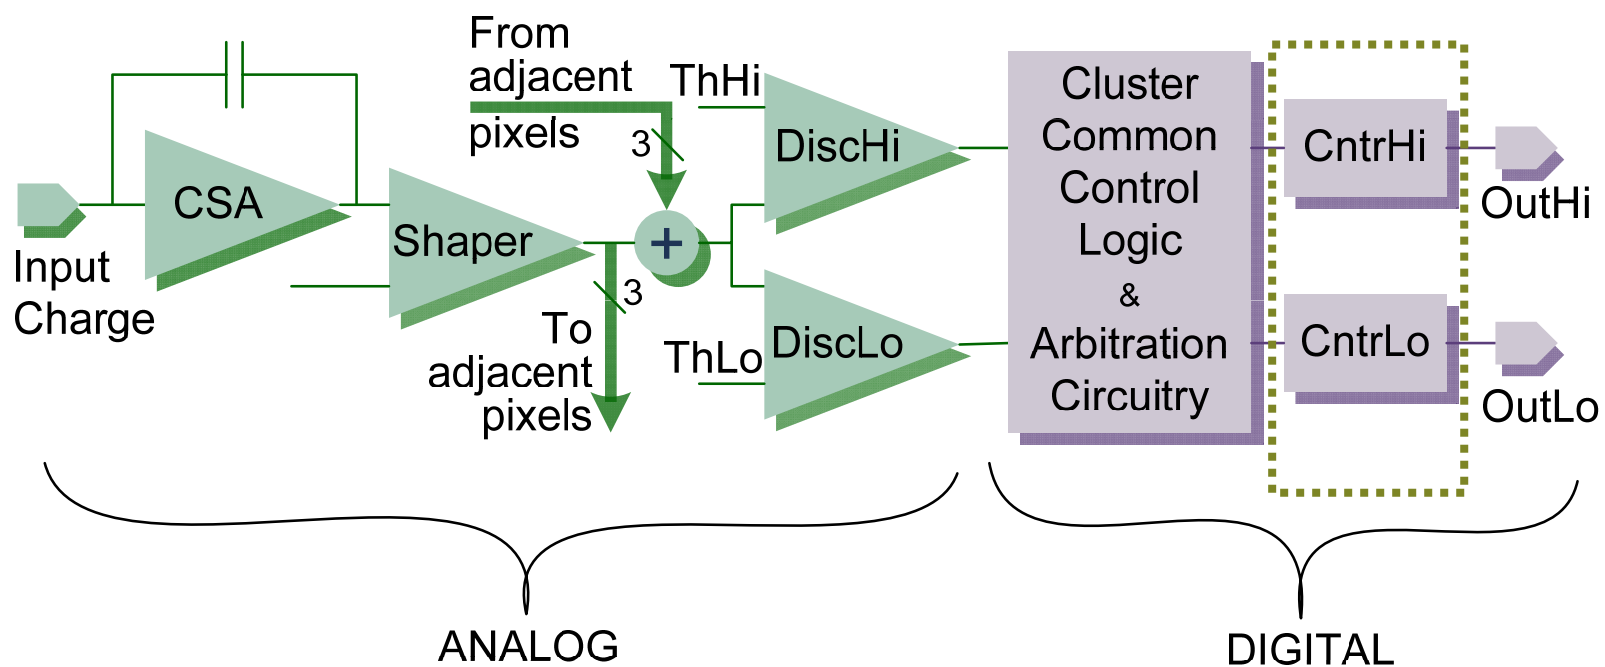

Medipix3 will have arbitrator circuits to remove the effects of charge sharing.

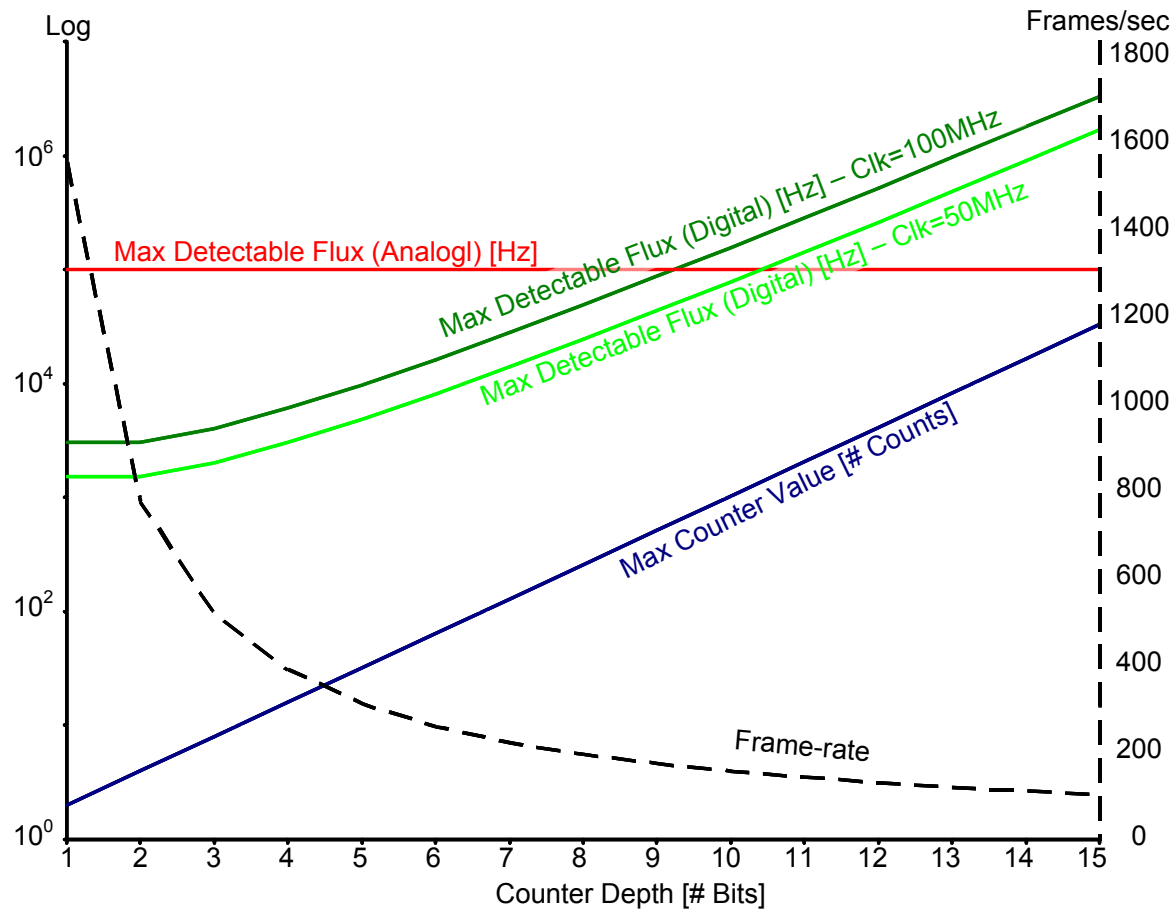

# Medipix3

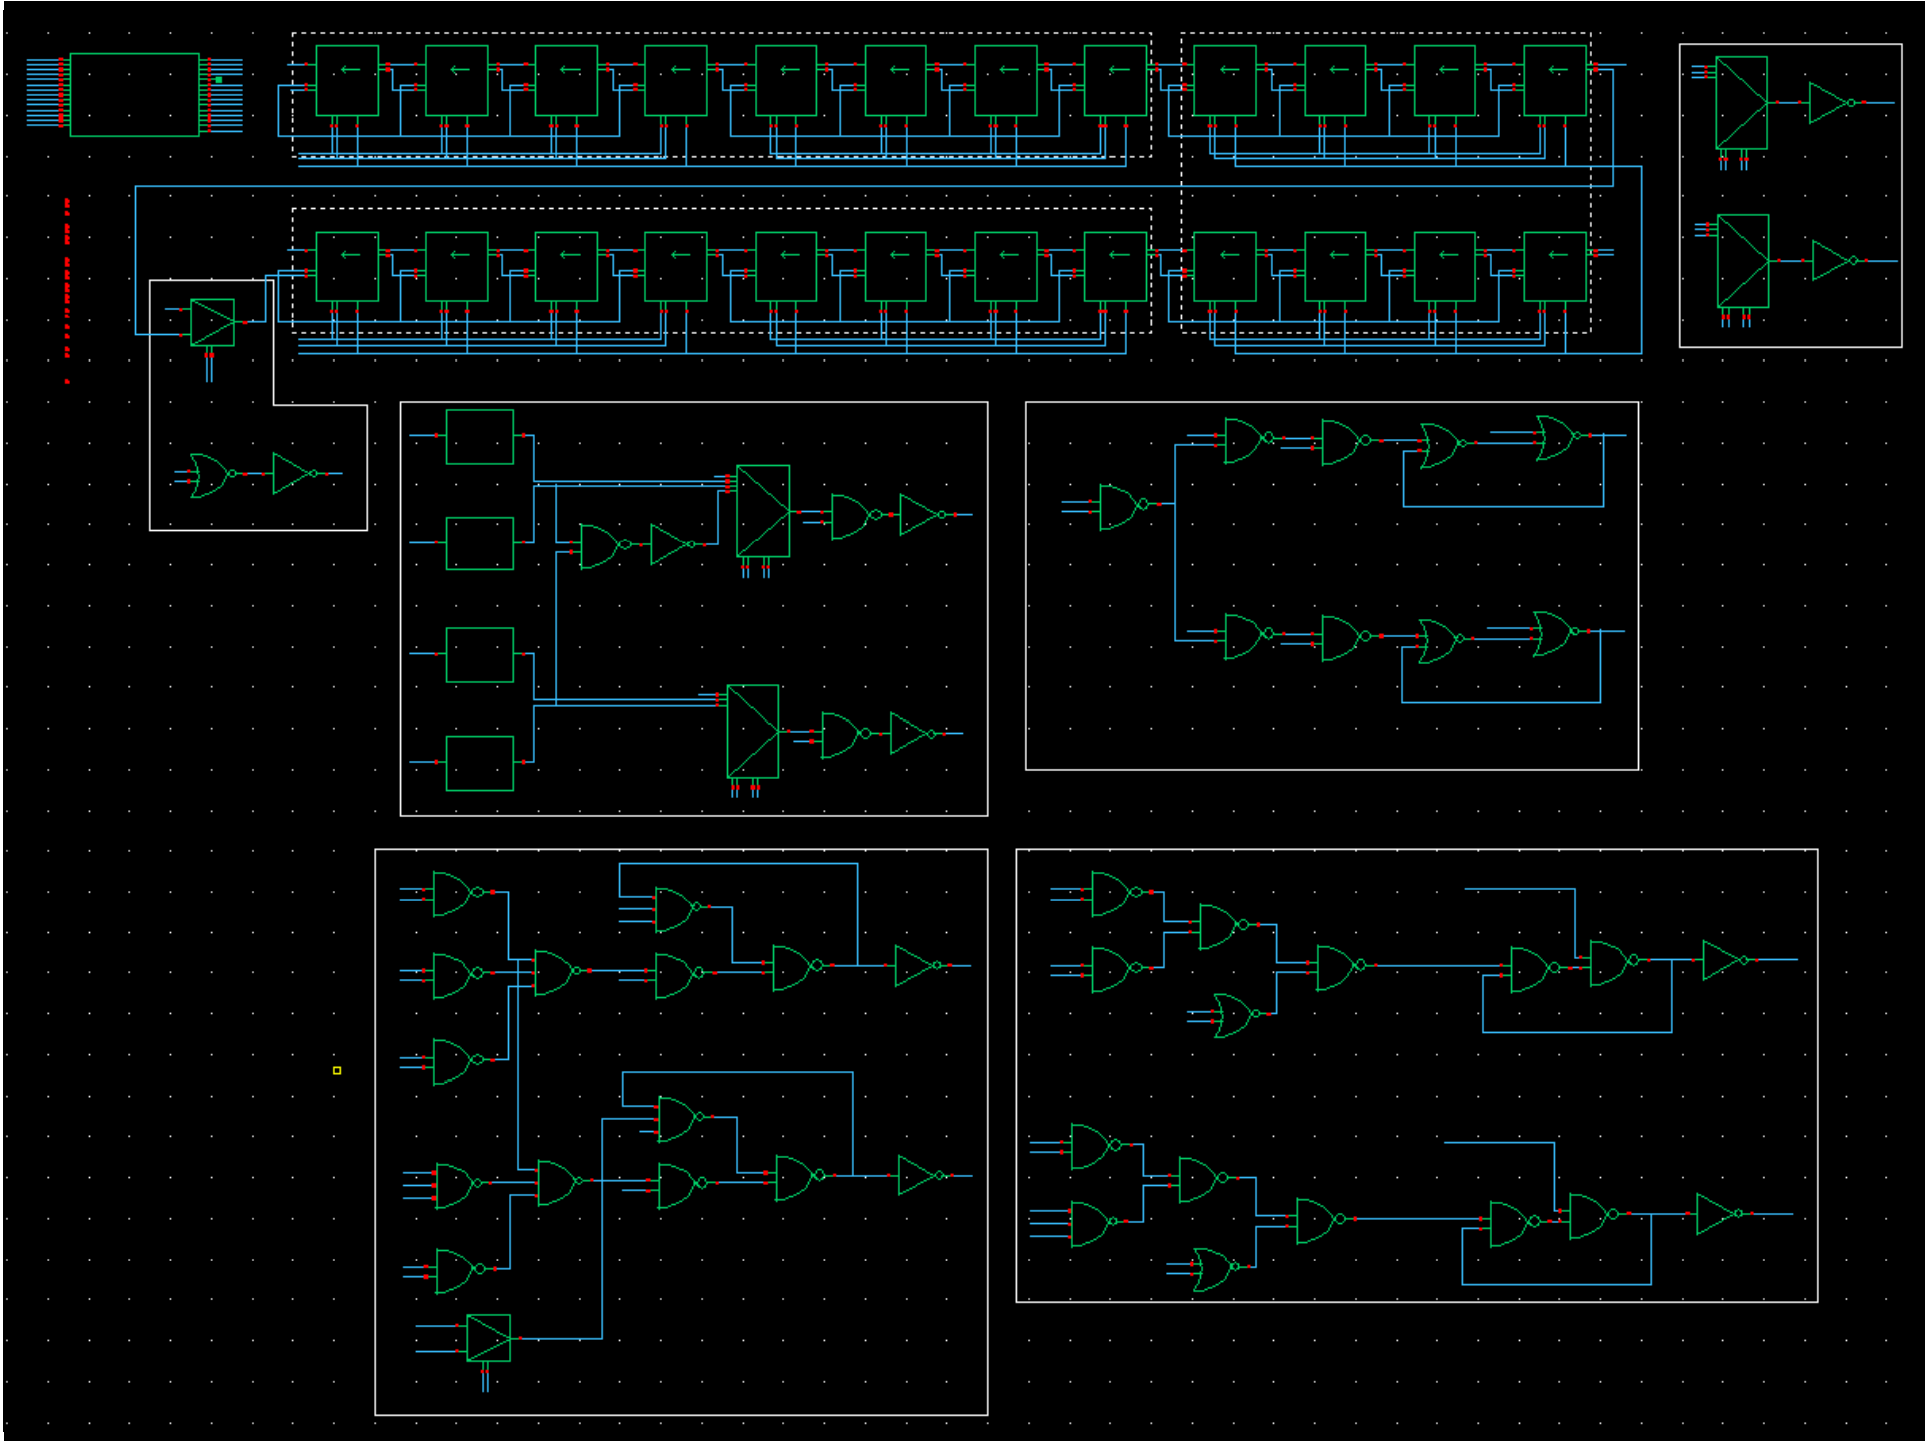

# Limits on Counter Depth

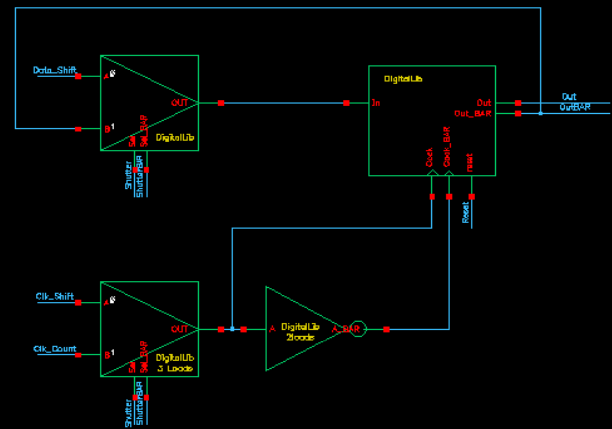

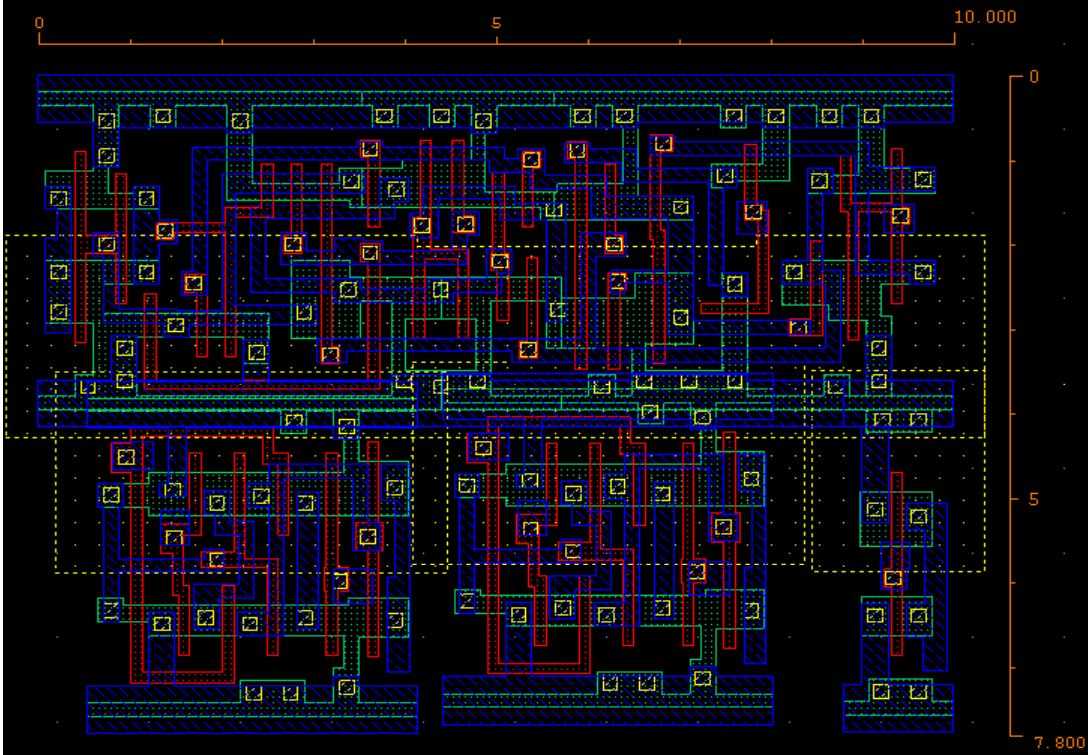

# Configurable-Depth Counters/Shift Registers

Properties	Configurable-Depth			
	2x1	2x4	2x12	1x24
Counter Depth	2x1	2x4	2x12	1x24
Max Counter Value	2	16	4096	16777216
$T_{\text{Readout}}$ / Frame [ms]	0.66	2.62	7.86	15.72
Max Cont. Framerate [fps] <sup>◇</sup>	1526	381	127	--
Max Sustained Framerate [fps] <sup>⊕</sup>	763	191	64	64

◇ Continuous Read/Write Mode (i.e. no deadtime)

⊕ Sequential Read/Write Mode

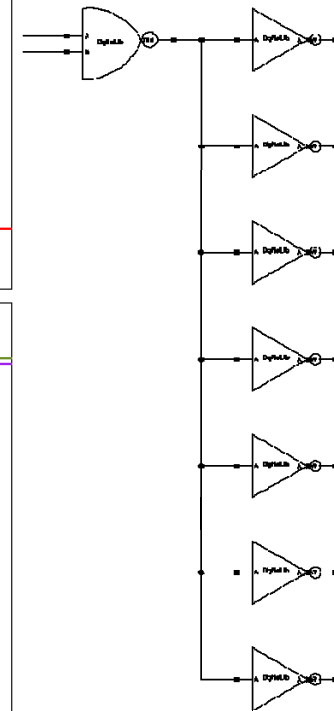

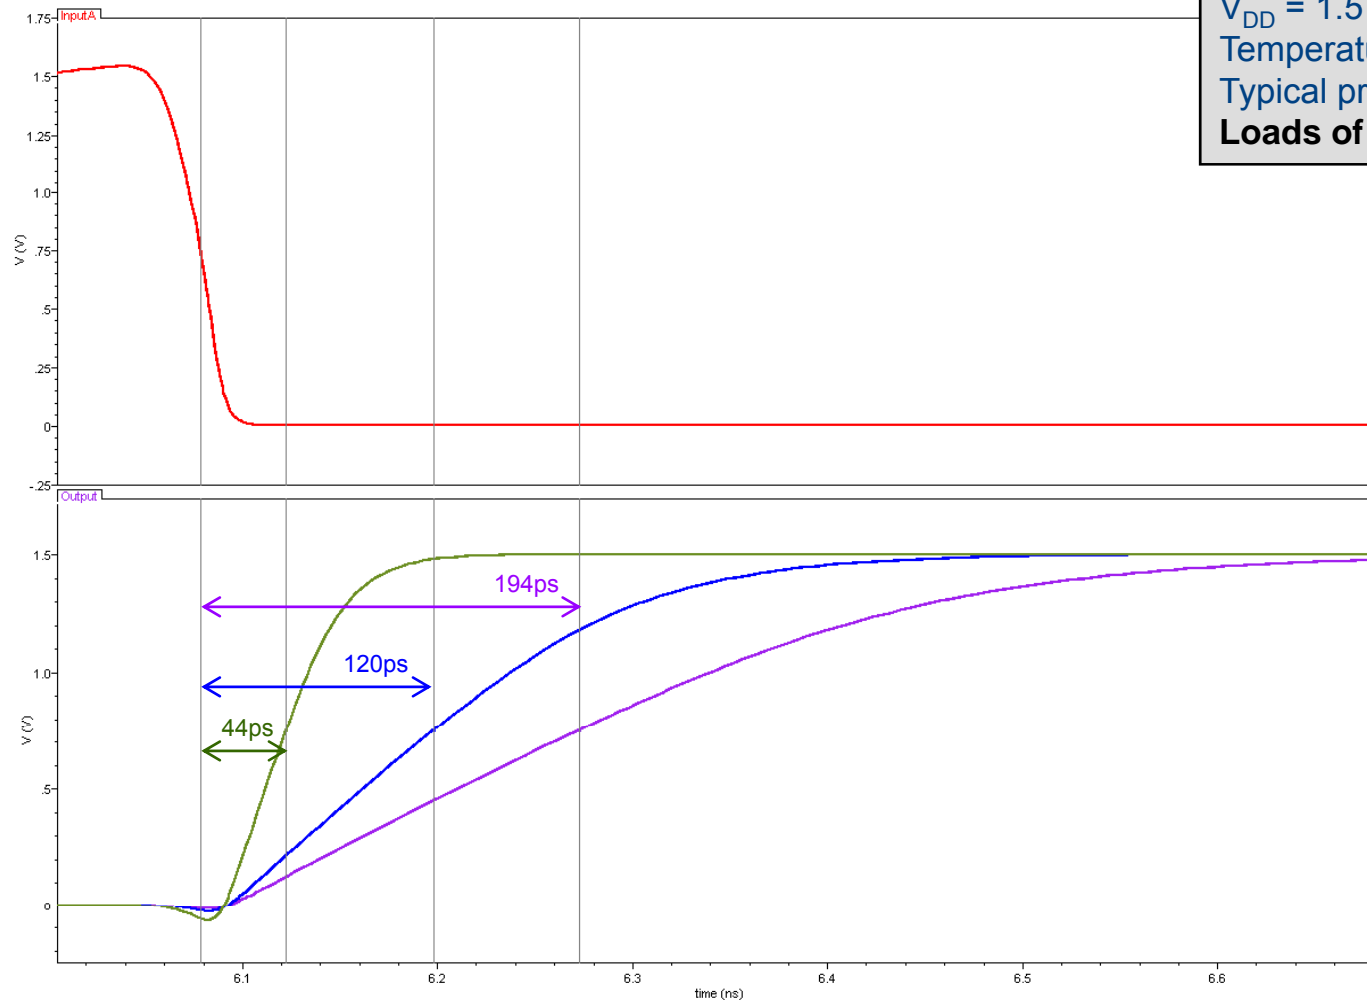

Calculations based on: ReadClk = 100MHz  
Single-bit serial output

# Circuit Performance

2-input min-sized NAND  
 $V_{DD} = 1.5\text{ V}$   
Temperature =  $25^\circ\text{C}$   
Typical process conditions  
Loads of 1, 7, & 13 inverters

November, 2008  
Geneva

# Loading on Output

2-input min-sized NAND  
 $V_{DD} = 1.5\text{ V}$   
Temperature = 25°C  
Typical process conditions  
# Loads varied from 1 to 30

14 November, 2008  
Geneva

# Process Variation

2-input min-sized NAND  
 $V_{DD} = 1.5\text{ V}$   
Temperature = 25°C  
**Varied process conditions**  
Load: 13 min-sized inverters

The simulated process parameters can be modified by  $\pm 3\sigma$  in order to model faster (FF) or slower (SS) transistors.

# Temperature

2-input min-sized NAND  
 $V_{DD} = 1.5\text{ V}$   
Temp. varied from 25°C to 75°C  
Typical process conditions  
Load: 13 min-sized inverters

14 November, 2008  
Geneva

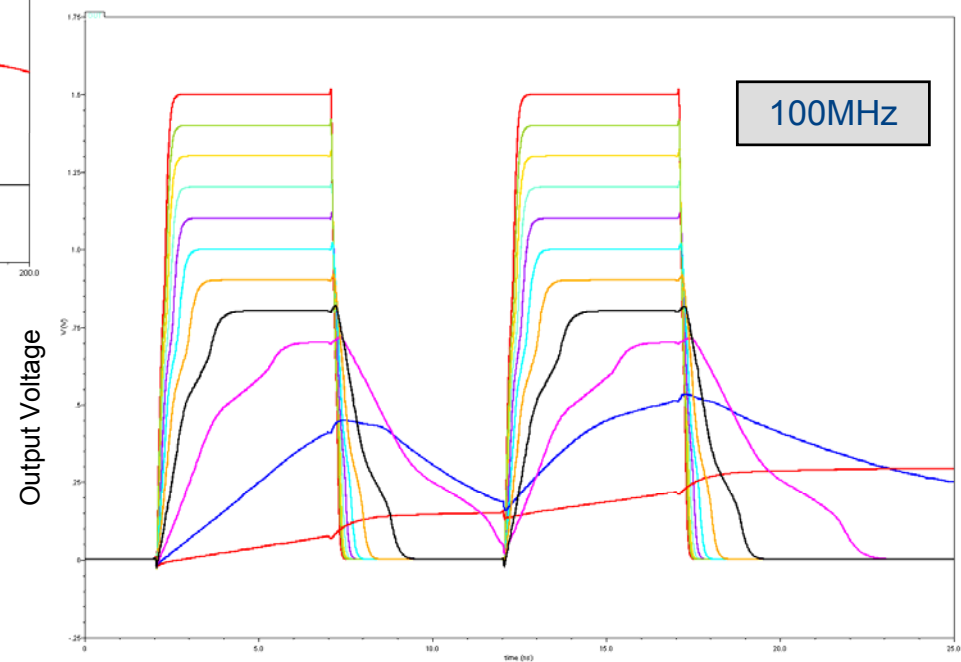

# $V_{DD}$ Drop Along a Column

2-input min-sized NAND  
 $V_{DD}$  varied from 0.5V to 1.5V  
Temperature = 25°C  
Typical process conditions  
Load: 13 min-sized inverters

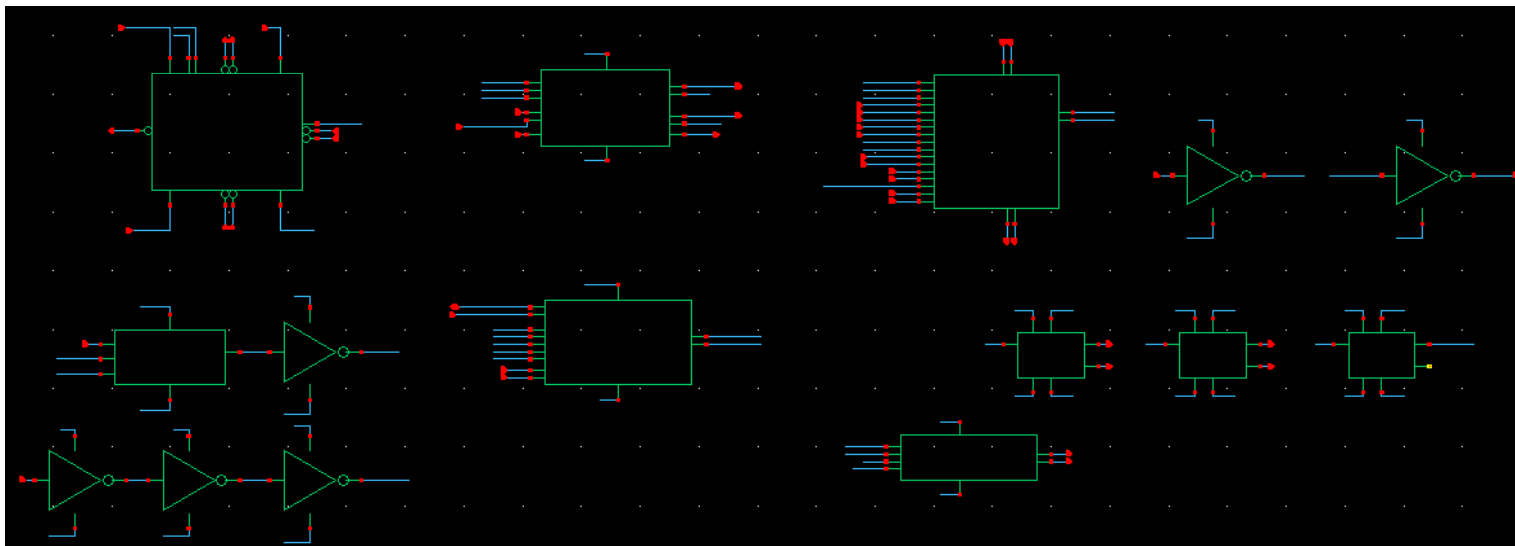

10MHz

# Digital Verification

- Arbitration, threshold synchronization, and inter-pixel communication circuits
  1. Single Pixel Mode: Sequential RW
  2. Single Pixel Mode: Continuous RW
  3. Charge Summing Mode : Sequential RW
  4. Charge Summing Mode: CRW
  5. Colour Mode, SPM: SRW
  6. Colour Mode, SRM: CRW
  7. Colour Mode, CSM: SRW
  8. Colour Mode, CSM: CRW
- 2 configurable-depth counters/shift registers

# Medipix Collaborations

## Medipix2 Collaboration

Institut de Física d'Altes Energies IFAE  
University of Cagliari  
UC Berkeley, Space Science Laboratory  
Commissariat à l'Energie Atomique CEA  
CERN  
Czech Academy of Sciences  
Czech Technical University  
Friedrich-Alexander- Universität  
ESRF  
Albert-Ludwigs- Universität  
University of Glasgow  
University of Houston  
Medical Research Council MRC  
Mid-Sweden University (Mittuniversitetet)  
Università di Napoli Federico II  
NIKHEF  
Università di Pisa

## Medipix3 Collaboration

University of Canterbury  
CEA  
CERN  
DESY  
The Diamond Light Source  
Albert-Ludwigs-Universität  
University of Glasgow  
Institute for Synchrotron Radiation  
Leiden Institute of Chemistry  
NIKHEF  
Medical Research Council  
Mid-Sweden University (Mittuniversitetet)  
Czech Technical University  
ESRF  
Universität Erlangen-Nurnberg  
Space Sciences Laboratory, UC Berkeley  
VTT Information Technology

# Training

- **2 French courses (CERN Language Training)**
- **Europractice courses at EPFL**
  - Transistor-Level Analog IC Design
  - Low-Power, Low-Voltage IC Design
  - Advanced Digital IC Design
- **International Summer School On Nuclear Physics Methods and Accelerators In Biology and Medicine**
- **Short course on Radiation Detection and Measurement**
- **IEEE NSS/MIC 2007, 2008**
- **TWEPP 2008**
- **Joint Workshop on Detector Development for Future Particle Physics and Photon Science Experiments**
- **Summer student lectures and CERN seminars**
- **Negotiating Effectively (CERN Management Training)**

# Presentations

- **4<sup>th</sup> International Summer School and Workshop on Nuclear Physics Methods and Accelerators in Biology and Medicine, Prague (July 2007)**
  - “Counter architectures for a single photon-counting pixel detector such as Medipix3” (Oral presentation – Best Student Talk)
- **Topical Workshop on Electronics for Particle Physics (TWEPP), Naxos (September 2008)**
  - “Design Considerations for Area-Constrained In-Pixel Photon Counting in Medipix3” (Poster presentation)
- **Medipix Open Meetings (various locations: CERN, Mid-Sweden University, Czech Technical University)**
  - “Medipix2 MXR Wafer Testing Results”
  - “Circuit Modeling for Timepix”
  - “Reconfigurable Counter for Medipix3”
  - “Circuit Modeling for Medipix3”
  - “Medipix3 Digital Verification”
