Beam Interlocks

Thursday 5 February 2009 18:10 (20 minutes)

A large fraction of the MPS was commissioned in 2008 in view of the first LHC run, and first attempts to automate test sequences were implemented. This presentation will present the commissioning plans for the MPS system in 2009 based on the 2008 experience. A possible planning of the tests will be presented, including time estimates, scheduling issues and compatibility with HWC. Controls requirements will be outlined. MPS tests with beam will be discussed.

Presenter: WENNINGER, Jorg

Session Classification: Session 08 - What we will do for beam preparation in 2009
