Experiments desiderata

Friday, 6 February 2009 08:30 (20 minutes)

In this talk, an attempt will be made to review the LHC experiments desiderata in the current LHC context. The impact on the physics program of the beam energy and integrated luminosity shall be reminded. In particular, the benefits and shortcomings will be presented of a 900 GeV run and of a pilot run at a yet to be defined higher energy. A few run scenari for 2009 (and 2010) will be sketched.
