## Beam-based measurements

*Thursday, 5 February 2009 09:20 (20 minutes)*

The constraints in the LHC machine protection impose tighter optics tolerances than in any other hadron collider. A variety of beam-based measurements in the first days of LHC operation was effective to measure aperture clearance, magnet polarities and machine optics. A summary of these measurements is given together with model insights.

**Primary author:** TOMAS, Rogelio

**Co-authors:** Dr DEHNING, Bernd (CERN); Dr RONCAROLO, Federico (CERN); Dr ZIMMERMANN, Frank (CERN); Dr AGAPOV, Ilya (CERN); Dr WENNINGER, Jorg (CERN); Mr FUCHSBERGER, Kajetan (CERN); Dr AIBA, Masamitsu (CERN); Dr GIOVANNOZZI, Massimo (CERN); Dr LAMONT, Mike (CERN); Dr CALAGA, Rama (BNL); Dr REDAELLI, Stefano (CERN); Dr KAIN, Verena (CERN); Dr SUN, Yipeng (CERN)

**Presenter:** TOMAS, Rogelio

**Session Classification:** Session 07 - What did we learn with beam in 2008?
