## Powering Interlocks

*Thursday, 5 February 2009 17:40 (20 minutes)*

The powering interlock systems for sc and nc magnets have been fully validated during HWC 2008. The presentation will summarise the changes and new functionalities that will be applied to the two interlock systems during the shut down and their impact on future re-commissioning. Improvements expected for the commissioning tools will be summarised, including time estimates and scheduling issues for HWC and beam commissioning 2009.
