

OSG Comments on the 4 Policies
presented today

OSG Comments on the 4 Policies being discussed today Ruth Pordes

VO Registration

- policy in draft form that is compatible with the JSPG policy. We will work on making a timeline for approval in the next few months.

VO Management

- No policy currently planned. WLCG and many other VOs on OSG use VOMRS which we understand implies compliance.
- OSG will have procedures rather than required policy for "traceability of the user such that VO management can find out the user's membership info and link it back to actions on the grid." and procedures that enable management of the users renewal, banning etc.
- OSG will ask for a variance here as needed.

User Level Accounting

- User accounting data is currently public. Acceptance of the policy will result in a plan to move the data from gratia to Apel to some timeline. This development will take some time (competing with other needs).

VO Portals

- There will be no OSG specific policy here and we will ask for a variance.
- LHC VOs will be covered at the experiment level by the WLCG policy, but other VOs will not have such a policy applied.
