

CMS

- **Monitoring**
- **Enforce correct publishing in BDII**
- **WLCG should monitor services**

- Preparation of 2009-2010 data taking is going on
 - Simulation running full steam
 - FEST regular activities
- DIRAC : ready (just consolidation)
 - More redundancy and scalability
 - The final production H/W configuration to be addressed.
 - ↳ Running at the limit of h/w capabilities → requested at least 5 times more to cope with (at least) doubled load and peaks.
- Issues (addressed and traceable)
 - Data access issues and instabilities of services are still the main problem.
 - Preventing problems by improving site monitoring tools and interacting closely with VOs.
 - ↳ Improved a lot since past years
- Looking forward to use (not necessarily in the same order):
 - ↳ Xroot as solution to file access problems
 - ↳ CREAM Direct submission (limitations of gLite WMS)
 - ↳ Generic pilot and filling mode.

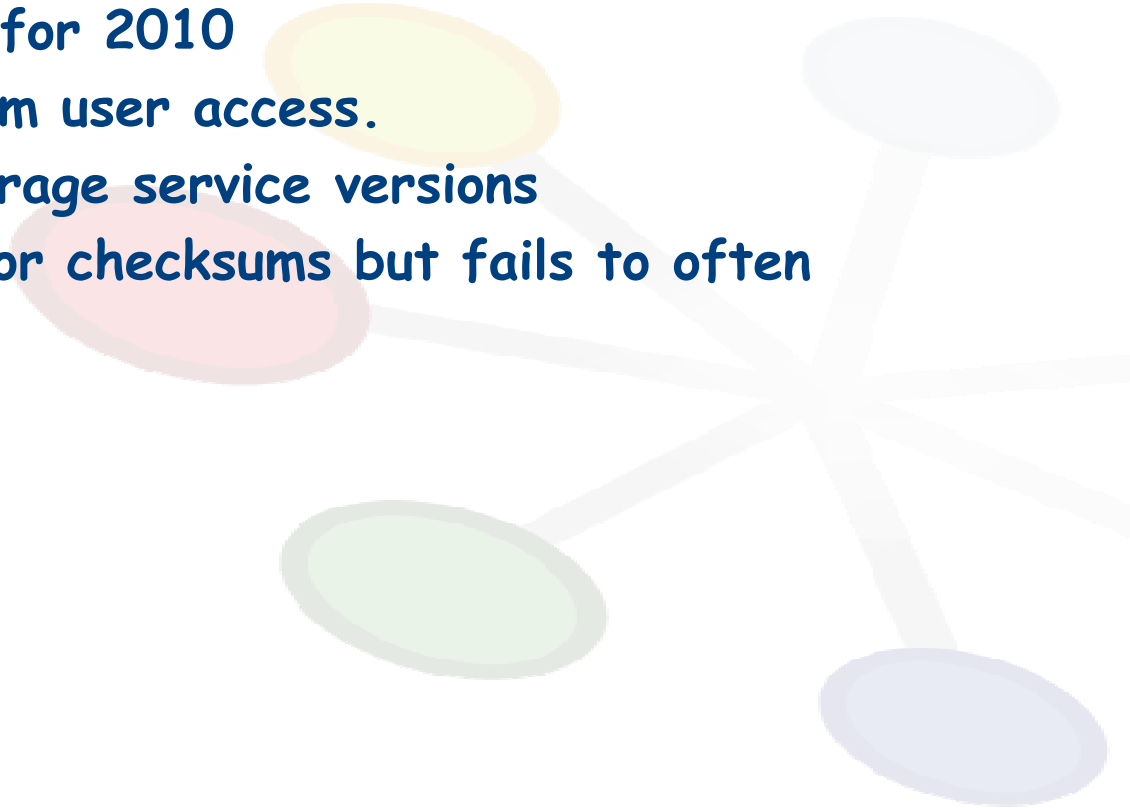

ATLAS Summary

- Still a lot of things to deploy, test and continue to hone
 - SL5 at sites not yet upgraded
 - T1 Frontier & T2 Squids
 - Tape protection at T1s
 - All disk pledges deployed
 - Physics groups at T1s and T2s
 - Analysis activity
 - Hammercloud and UAT

- Site services waiting for SL5 mod_gridsite to migrate.
- Don't kill on RSS
- Frontier/squid to be deployed
- LCG-CE retained for 2010
- Protect tapes from user access.
- Recommended storage service versions
- FTS2.2 wanted for checksums but fails to often

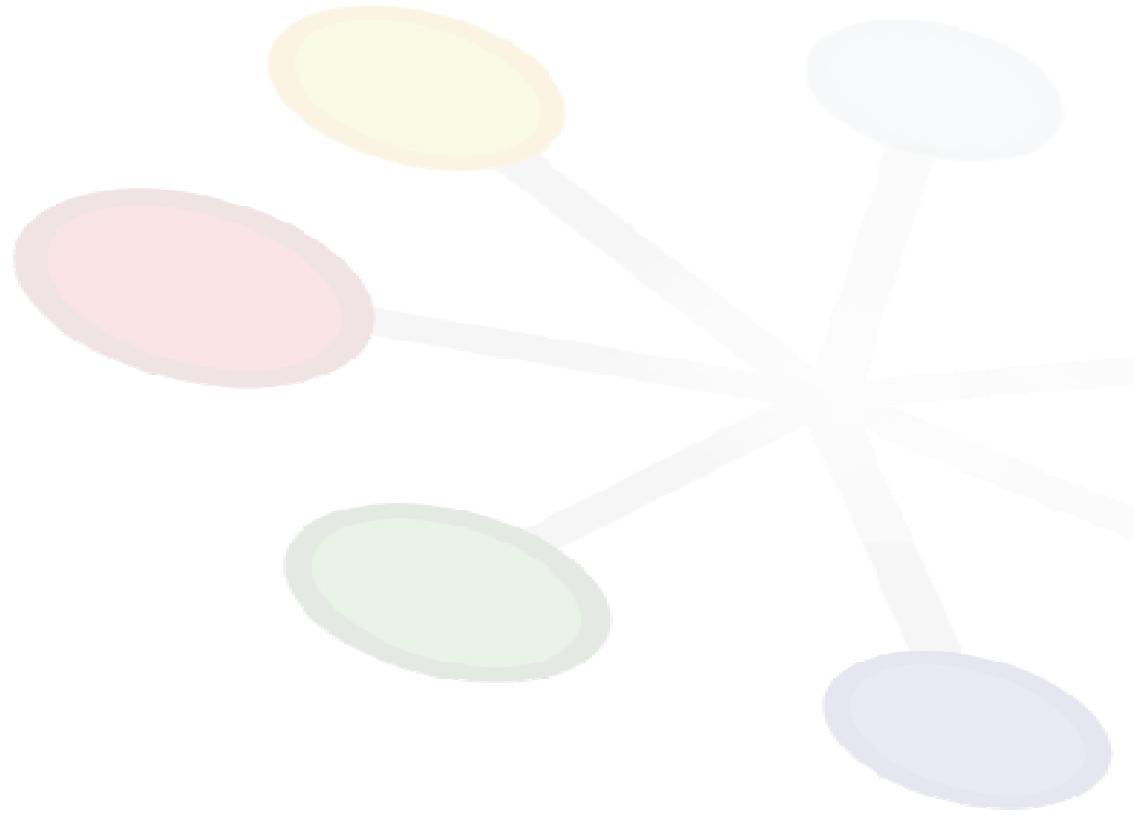

Alice Summary

- All sites providing CREAM-CE to ALICE are encouraged to migrate to CREAM1.5 asap
- The gLite3.2 VOBOX is now in production and sites should migrate their nodes also immediately
- ALICE keeps the requirement of the migration of WNs to SL5
- Independent of CREAM, sites are encourage to provide homogeneous setups for ALICE in terms of WNs and VOBOXES
 - This will ease site admins and experiment lives
 - **And now it is the time!**

- Upgrade to latest CREAM

- Any issues that GDB, rather than sites, should progress?
- Should Technical Forum take action?
