

# **ALPGEN update**

M.Mangano, M.Chiesa, M.Moretti, F.Piccinini

# ALPGEN update

M.Mangano, M.Chiesa, M.Moretti, F.Piccinini

- All studies by LHC experiment(s) in run I based on versions v2.13 and v2.14 of AlpGen
  - v2.13 release: June 2007
  - v2.14 release: Mar 2011. Minor update of 2.13: new PDFs, option to have different  $\alpha_s$  in ME and shower evolution. Default params used in most analyses identical to v2.13
- ➡ practically no tuning/updates, out-of-the-box performance

# ALPGEN update

M.Mangano, M.Chiesa, M.Moretti, F.Piccinini

- All studies by LHC experiment(s) in run I based on versions v2.13 and v2.14 of AlpGen
  - v2.13 release: June 2007
  - v2.14 release: Mar 2011. Minor update of 2.13: new PDFs, option to have different  $\alpha_s$  in ME and shower evolution. Default params used in most analyses identical to v2.13
  - ➡ practically no tuning/updates, out-of-the-box performance
- Proven as a reliable tool to describe multijet final states

# ALPGEN update

M.Mangano, M.Chiesa, M.Moretti, F.Piccinini

- All studies by LHC experiment(s) in run I based on versions v2.13 and v2.14 of AlpGen
  - v2.13 release: June 2007
  - v2.14 release: Mar 2011. Minor update of 2.13: new PDFs, option to have different  $\alpha_s$  in ME and shower evolution. Default params used in most analyses identical to v2.13
- ➔ practically no tuning/updates, out-of-the-box performance
- Proven as a reliable tool to describe multijet final states
- Updates focused on extending the dynamical domain, to match the needs of increase in energy and luminosity:
  - large Njet multiplicities
  - inclusion of EW corrections at high  $Q^2$

# ALPGEN update, main aspects

# ALPGEN update, main aspects

- **Coding changes ( ~ transparent to the user)**

# ALPGEN update, main aspects

- **Coding changes ( ~ transparent to the user)**
  - Faster core of routines for ME evaluation. F90-only alpha routines (OK with any of today's gfortran compilers)

# ALPGEN update, main aspects

- **Coding changes ( ~ transparent to the user)**
  - Faster core of routines for ME evaluation. F90-only alpha routines (OK with any of today's gfortran compilers)
  - main driver, user interface etc: same

  - option to generate in bins of pt for the highest-pt jet — compatible with matching etc
  - option to veto hvq's produced by the shower

# ALPGEN update, main aspects

# ALPGEN update, main aspects

- **Physics updates**

- Increased number of final-state jet multiplicity.
  - in principle matrix-element generation up to 20 final state partons
  - in practice, CPU limits njet process-by-process. E.g. for Njets  $\rightarrow$  10 jets,  $W+N$ jets  $\rightarrow$  8 jets, ...)
- Inclusion of EW Sudakovs (optional) for most processes (*Denner-Pozzorini algorithm, hep-ph/0408068*)
- Interface to HW++/HW7/PY8 (K.Hamilton and A.Papafestathiou for HW, R. Corke for PY)
- Inclusion of spin correlations in top decays for all processes with tops (was only in  $t\bar{t}$  and  $t\bar{t}H$ , it's been added to  $t\bar{t}t\bar{t}$ ,  $t\bar{t}b\bar{b}$ ,  $t\bar{t}V$ , ...)
- New hard procs:  $Z\gamma+jets$ ,  $Z\gamma QQ+jets$
- Included 6-quark processes (e.g.  $qq\rightarrow qq\bar{q}\bar{q}+ N$  gluons)

**Examples: multijet rates**

# Example: multi jet rates

Generation (8 TeV):

$p_{Tmin}=40$  GeV  $\eta_{max}=5$   $R_{min}=0.7$

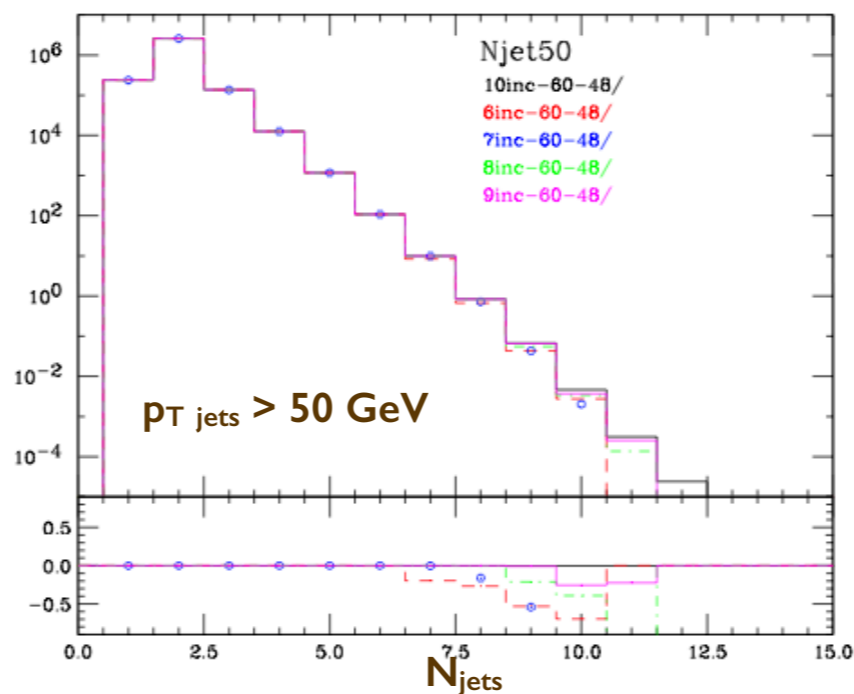

Matching:

$\eta_{clus}=48$  GeV

Analysis:

1 jet > 60 GeV

$N_{inc}$  in the plots means: used matrix elements up to  $N$  partons

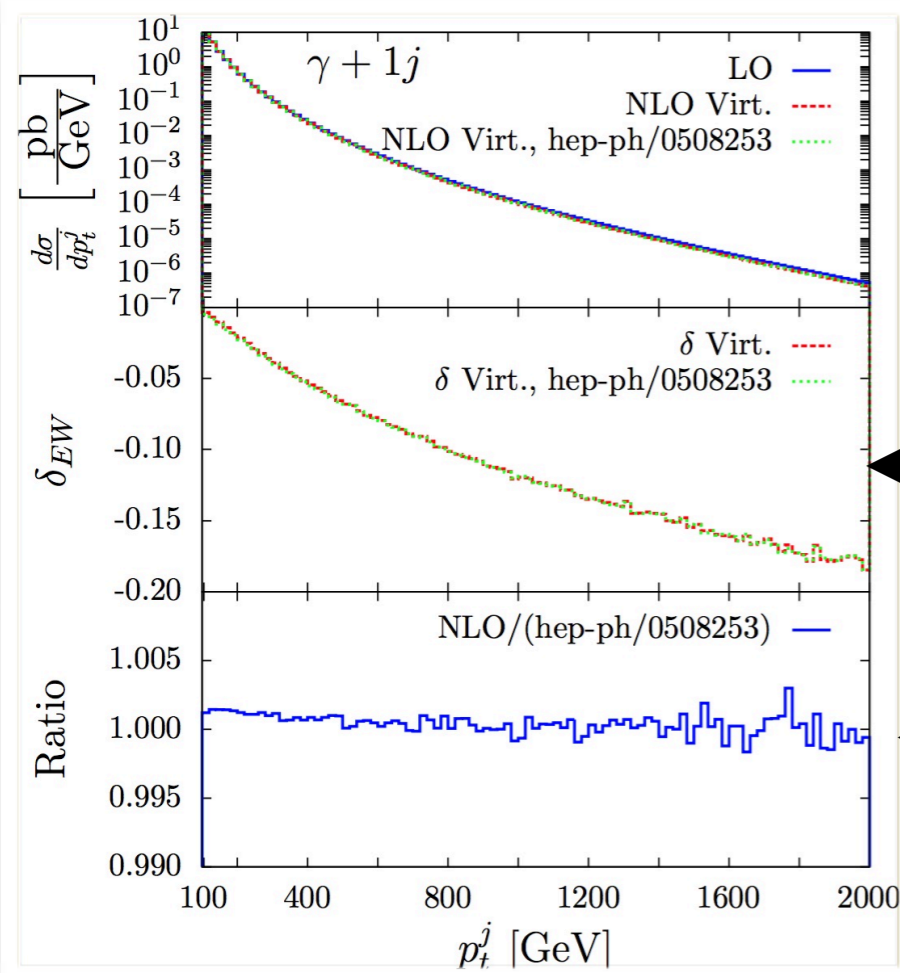

$p_T > 40$ GeV	$N_{max}=6$	$N_{max}=7$	$N_{max}=8$	$N_{max}=9$	$N_{max}=10$
Njets=6	<b>390</b>	390	390	390	390
Njets=7	39	<b>41</b>	41	41	41
Njets=8	3.6	4.0	<b>4.1</b>	4.1	4.1
Njets=9	0.46	0.49	0.52	<b>0.53</b>	0.53
Njets=10	2E-02	2.5E-02	2.8E-02	3.1E-02	<b>3.2E-02</b>
Njets=11	2.2E-03	1.7E-03	2.0E-03	2E-03	2.2E-03
Njets=12	no stat	1.1E-04	1.1E-04	1.6E-04	1.4E-04

## Example: multi jet rates

<b><math>p_T &gt; 70</math> GeV</b>	$N_{\max}=6$	$N_{\max}=7$	$N_{\max}=8$	$N_{\max}=9$	$N_{\max}=10$
Njets=6	<b>11.1</b>	11.5	11.5	11.5	11.5
Njets=7	0.57	<b>0.76</b>	0.79	0.79	0.79
Njets=8	2.9E-02	3.3E-02	<b>4.7E-02</b>	4.8E-02	4.9E-02
Njets=9	1.1E-03	1.5E-03	1.8E-03	<b>2.7E-03</b>	2.9E-03
Njets=10	no stat	6.1E-05	6.5E-05	8.2E-05	<b>1.4E-04</b>
