

SLHC-PP – Work Package 7

SLHC-PP – Critical Components for the Injector Upgrade
The Superconducting Proton Linac Source and Low Level RF Systems
1st Milestones – R Scrivens – 24/11/2008

- Task 7.1
- Deliverable 7.1.1 - Due M12 - Report
- Thermal modeling of the Linac 4 source at the duty factor for SPL operation
- Used ANSYS on the Catia model (with simplifications).
- Model shows that the PE surrounding of the source and lack of active cooling leads to extreme temperatures in the source.
- Electrodes in the extraction region are a challenge (not easy to cool).
- Study for the deliverable mostly completed.
- Report being written.
- Work on milestone 7.1.1 has begun. (Material changes and cooling among other modifications).

SLHC-PP - Critical Components for the Injector Upgrade
The Superconducting Proton Linac Source and Low Level RF Systems
1st Milestones - R Scrivens - 24/11/2008

Linac 4 source -
Almost assembled.

Thermal simulation
of the source (low duty factor)

PREPARATORY PHASE
2008-2011

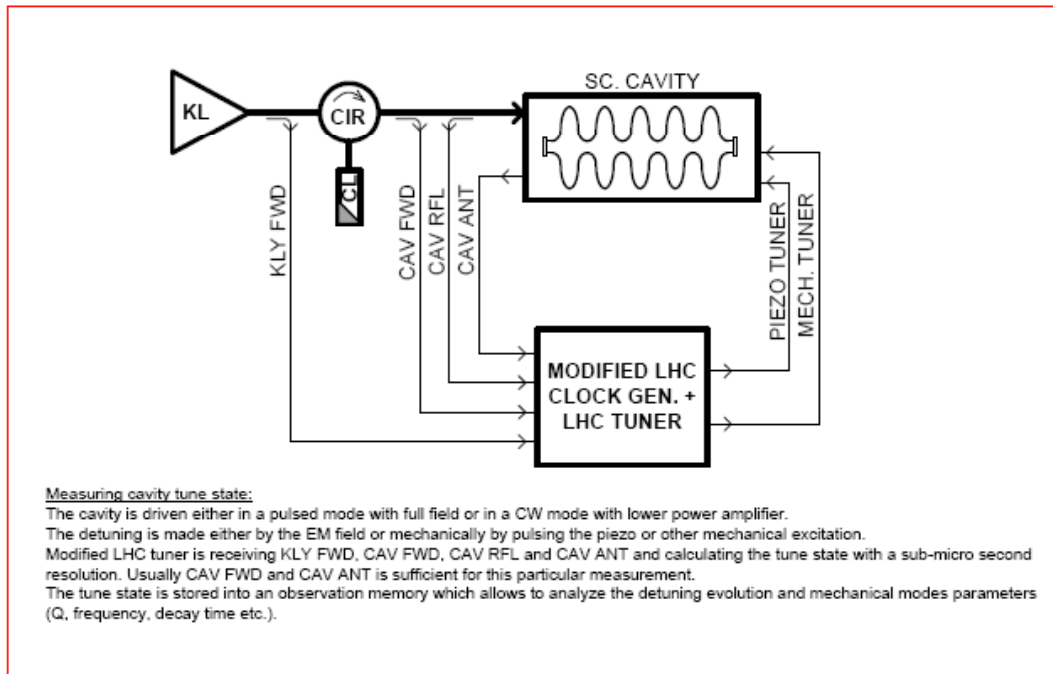

SLHC-PP - Critical Components for the Injector Upgrade
The Superconducting Proton Linac Source and Low Level RF Systems
1st Milestones - R Scrivens - 24/11/2008

- Task 7.2
- Deliverable 7.2.1 - Due M12 - Report
- In depth characterisation of the two tuners plus cavities developed in the frame of the HIPPI JRA (FP6).
- Visits to CEA to discuss the modalities.
- Saclay cavity and tuner are being assembled and will be cooled down soon.
- Measurements (at high power, 50Hz) will then made in the 1st quarter of 2009 (after commissioning couplers to 1MW).
- INFN cavity will be delivered to Saclay in 2008, there are some technical issues to solve before making these measurements.

SLHC-PP - Critical Components for the Injector Upgrade
The Superconducting Proton Linac Source and Low Level RF Systems
1st Milestones - R Scrivens - 24/11/2008

- Use modified LHC low level RF to control the Saclay RF system at 704MHz.

- Budgets:
- Staff: So far about 53% of 2008 manpower has been charged to time sheets.
- Fellows: Have arrived later, costing correct.
=> ~100kCHF of fellow allocation will not be used.
T7.2 to transfer 70kCHF to travel and material.
The remaining to be allocated later.
- Travel: About correct.
- Material: T7.1 Software purchase was not necessary.
Money will be used for RF generator building.
