

Carbon Fiber status

- *Status*

Comparisons – Reminder

Vacuum oven:

- Decent sized vacuum oven, 40cm²
- Vacuum pump similar to FNAL (guess)
- Fridge @-18C available (& large enough)
- Delayed due to paperwork needed to release material to Purdue
- But: No showstopper, all good on Purdue side For receiving

Conclusion

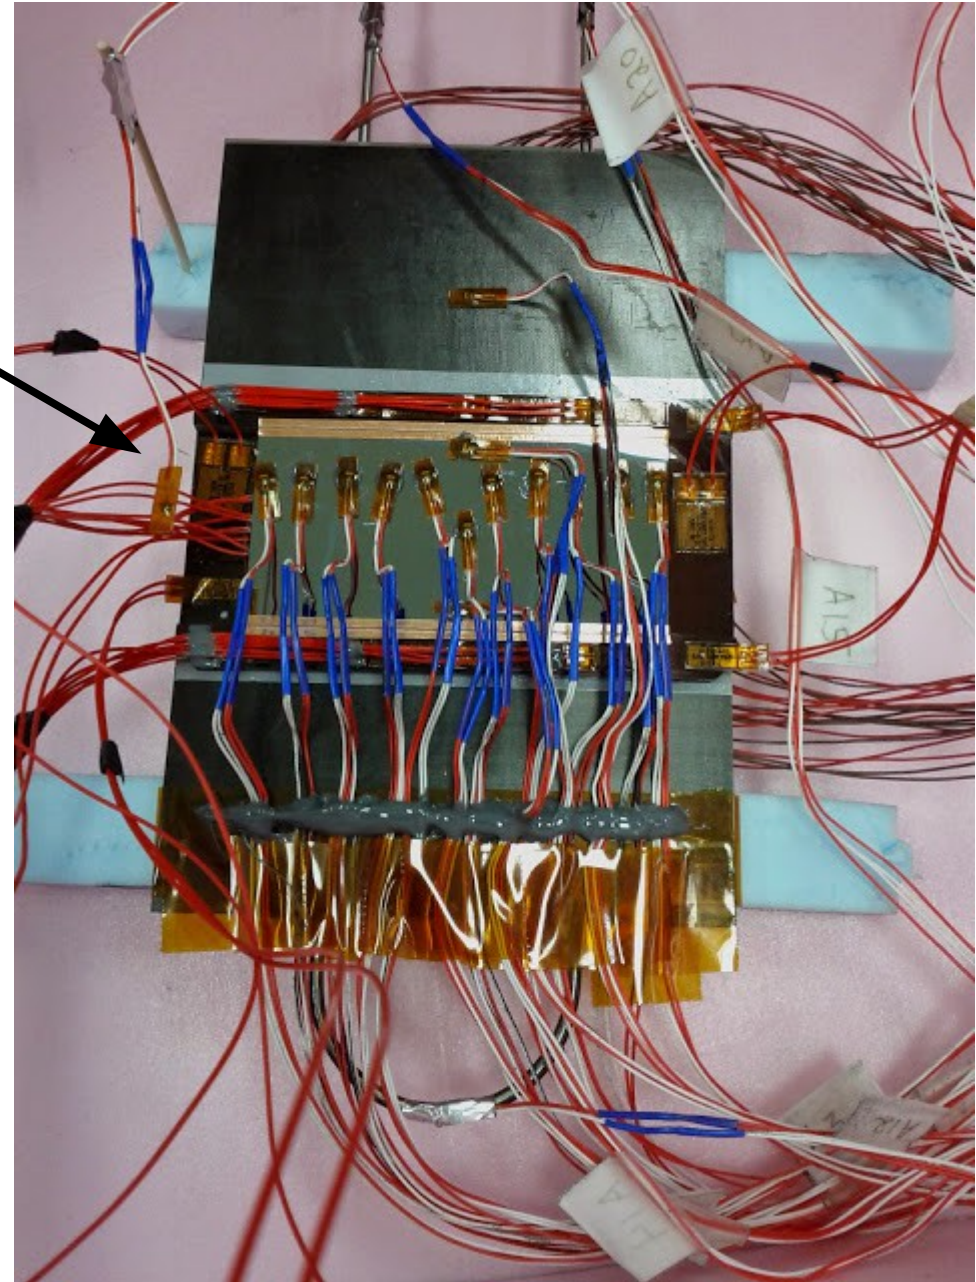

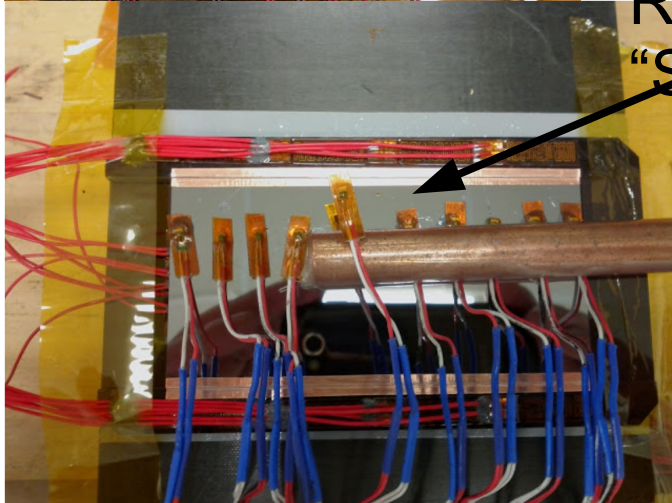

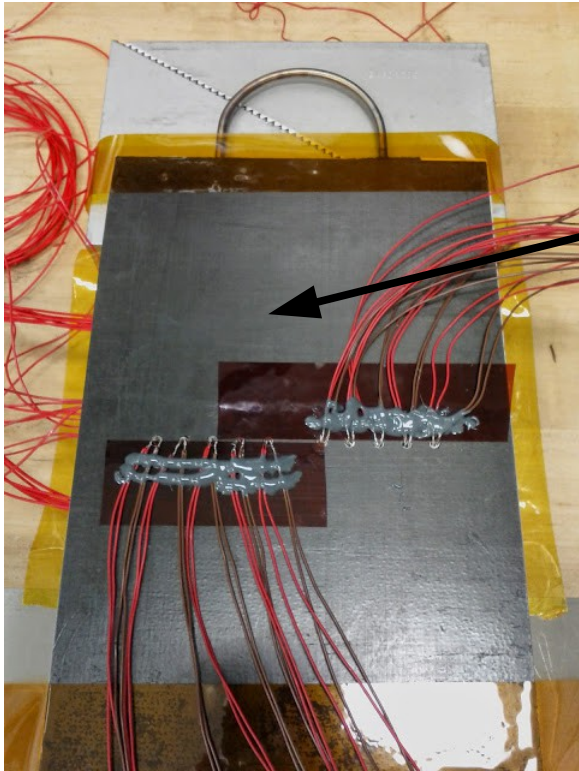

- Pieces for 10 modules should be possible to do in 1-2 days
- Still enough time or alternatively:
 - Produce at Fermilab, similar to last time

Backup

Complete test structure

Module prototype / CERN

- Complex assembly
