- WMS may consume GLUE2 as reported in the release notes:
  - <https://wiki.italiangrid.it/twiki/bin/view/WMS/WMS34ExtendedReleaseNotes>
- Never tested in the production environment
- WMS not included into UMD4, no porting to CentOS7 (lack of manpower)
  - It will remain on sl6, best effort support
- Trying to assess the real WMS usage, asking NGIs and VOs for some numbers

- For EGI the GLUE2 schema is the reference point
- Assessment of operations tools and procedures
  - Operations portal will be moved soon to GLUE2
  - Monitoring: some probes still consume GLUE1.3 (because clients that consume GLUE1.3)
- Need to test the functionalities among services
- Planning a gradual transition (during first half of next year?)
  - User education included

- We need the GLUE2.1 approved by OGF for CLOUD infrastructure purposes
- The activity is starting again
  - Not able to provide times at the moment

# Thank you for your attention.
