Search for long-lived particles at LHCb

Friday 7 July 2017 17:15 (15 minutes)

A flexible trigger system, excellent vertex locator, particle identification detectors, and forward acceptance allow unique exotica measurements to be performed at LHC energies using data collected with the LHCb detector. A summary of results will be presented, including searches for long-lived particles decaying into jet pairs or semi-leptonically.

Experimental Collaboration

LHCb
