Quarkonia in heavy ion collisions

Thursday, July 6, 2017 9:00 AM (15 minutes)

Quarkonium has been regarded as one of the golden probes to identify the phase transition from confined hadronic matter to the deconfined quark-gluon plasma (QGP) in heavy-ion collisions. Recent theoretical developments in the study of the J/ψ and Υ families at the energies of Large Hadron Collider (LHC) are reviewed. In particular, the possible implications related to the production and propagation of quarkonia in proton-nucleus collisions are discussed. A special emphasis is put on the excited states such as the ψ' , $\Upsilon(2S)$ and $\Upsilon(3S)$.

Experimental Collaboration

Presenters: Prof. FERREIRO, Elena (University of Santiago de Compostela); GONZALEZ FERREIRO, Elena (Universidade de Santiago de Compostela (ES)); GONZALEZ FERREIRO, Elena (Universidad de Santiago de Compostela)

Session Classification: Heavy ion physics

Track Classification: Heavy Ion Physics
