Searches for direct pair production of third generation squarks in final states with no leptons with the ATLAS detector

Thursday, July 6, 2017 5:45 PM (15 minutes)

Naturalness arguments for weak-scale supersymmetry favour supersymmetric partners of the third generation quarks with masses not too far from those of their Standard Model counterparts. Top or bottom squarks with masses less than or around one TeV can also give rise to direct pair production rates at the LHC that can be observed in the data sample recorded by the ATLAS detector. The talk presents recent ATLAS results from searches for direct stop and sbottom pair production in final states containing no leptons, using the data collected during the LHC Run 2.
