Contribution ID: 457

Type: **Talk**

### Highlights on massive winds from AGN

*Monday, 7 December 2015 14:00 (22 minutes)*

I will briefly review the evidence for high-velocity (mildly relativistic) and massive winds in Active Galactic Nuclei. I will then highlight some new recent results obtained in X-rays (mostly using deep XMM and Chandra observations) and at multi-frequencies for both low- $z$  AGNs and high- $z$  QSOs. Among other things, these studies indicate that massive, high-velocity, outflows may be more common than previously thought.
