

The SM HIGGS as the origin of the hot BIG BANG

Daniel G. Figueroa,
CERN, TH Division

TeVPA 2016, CERN, Switzerland

The Problem:

(p)Reheating into
a Thermal Plasma

Successful Reheating:

(p)Reheating into the Standard Model

Successful Reheating:

(p)Reheating into the Standard Model

Connection between SM and Inflationary Sector ???

Successful Reheating:

(p)Reheating into the Standard Model

Connection between SM and Inflationary Sector ???

Mediator fields ?

$$+ g^2 \phi^2 \chi^2 + h^2 \chi^2 \mathcal{H}^2$$

Successful Reheating:

(p)Reheating into the Standard Model

Connection between SM and Inflationary Sector ???

Higgs-Portal ?

$$g^2 \phi^2 |\mathcal{H}|^2$$

Successful Reheating:

(p)Reheating into the Standard Model

$$\mathcal{L} = \mathcal{L}(\phi, \varphi_i, \psi_j, A_\mu, h_{\mu\nu}, \dots)$$

Connection between SM and Inflationary Sector ???

No coupling ?

~~$$g^2 \phi^2 |\mathcal{H}|^2$$

$(g^2 \ll 1)$~~

Successful Reheating:

(p)Reheating into the Standard Model

Connection between SM and Inflationary Sector ???

- * Higgs Portals ?
- * Mediator fields ?
- * No coupling ?

(p)Reheating into the Standard Model

During Inflation ...

No Coupling
to Inflaton

1) LIGHT

$$m_{\varphi}^2 < H_*^2$$

2) HEAVY

$$m_{\varphi}^2 > H_*^2$$

(p)Reheating into
the Standard Model

(No Coupling to Inflaton)

1) LIGHT

→
@ Inflation

$$m_\varphi^2 < H_*^2$$

(p)Reheating into the Standard Model

(No Coupling to Inflaton)

1) LIGHT

→
@ Inflation

$$m_\varphi^2 < H_*^2$$

———— SM HIGGS (SPECTATOR) during INFLATION ————

○ **Inflation:** $dS(H_*)$, $(v \equiv 246 \text{ GeV} \ll H_* \lesssim 10^{14} \text{ GeV})$

○ **SM Higgs:** $\Phi = \frac{\varphi}{\sqrt{2}} \rightarrow V(\varphi) = \frac{\lambda(\mu)}{4} \varphi^4$, $\mu = \varphi \gg v$

○ **Prob. Dist:** φ light ($|V''| < H_*^2$) \Rightarrow $\begin{cases} \text{Random Walk } (k < aH_*) \\ P_{\text{eq}}(\varphi) \propto \text{Exp}\{-c\lambda_*(\varphi/H_*)^4\} \end{cases}$

● **End of Inflation:** $\varphi_* = \alpha H_* / \lambda_*^{1/4}$ $\alpha \in [0.001, 1]$ (99.9 %)

(p)Reheating into the Standard Model

(No Coupling to Inflaton)

1) LIGHT

→
@ Inflation

$$m_\varphi^2 < H_*^2$$
