

Commissioning and operational experience of the ATLAS IBL CO2 cooling system

Wednesday 25 May 2016 11:45 (30 minutes)

In 2014 the ATLAS IBL CO2 cooling system became operational. The IBL detector has run successfully since then with a CO2 cooling system being successful in operation. This talk will present the results and lessons learned from the commissioning period and will report on the operational performance and experience with the cooled detector during the physics run in 2015.
