Installation of EMMA, a Recoil Mass Spectrometer for TRIUMF's ISAC-II Facility

Tuesday 14 June 2016 19:00 (2 minutes)

EMMA is a recoil mass spectrometer designed to separate the recoils of nuclear reactions from the beams that produce them. It is being installed in the ISAC-II experimental hall of TRIUMF, where it will be used with heavy radioactive ion beams accelerated to energies close to the Coulomb barrier on a variety of targets. An update on its installation will be given.
