## **Towards new discoveries with neutrinos and dark matter**

*Tuesday 14 June 2016 08:30 (30 minutes)*

Next generation experiments are poised to help answer fundamental questions about neutrinos and dark matter, but rely on a quantitative understanding of perturbative and nonperturbative QCD. I briefly review the status of experimental searches and theoretical calculations in searchers for lepton number and CP violation in the neutrino sector, and for WIMP dark matter direct detection.
