Joining-up repositories

Breakout session 5

OAI6 Workshop

Geneva, 17-19 June 2009

The Repository Infrastructure Project

- Repository networks exist but tend to reflect funding for infrastructure e.g. national networks
- Some global initiatives e.g. Dublin Core
- True interoperability requires services that are organised and developed at the international level
- Is a shared vision possible?
- How can work be coordinated on a practical level?
- What are the key milestones?
- How can review-and-revise processes be put in place?

The project process

- Wiki set up with 4 initial scenarios
- Supported by a set of briefing materials
- Discussions invited around the four themes
- Distillation to arrive at 4 topics to develop into action plans
- Discussion at a two-day international workshop in Amsterdam in March 2009
- Further refinement of the action plans
- Project proposals being developed for potential funders

Initial scenarios on the wiki

- Four areas:
  - Preservation actions
  - Deposit workflows and environments
  - Access
  - Online reputation and reporting
- Each had use case(s) to stimulate discussion
- Online discussion period: Dec 08-end-Feb 09

Briefing materials

- Supported the online discussions
- Posted on the wiki and kept up to date (ongoing)
- Cover a range of topics, for example:
  - Harvesting services
  - Persistent identifiers
  - Storage
  - Validation of repositories
- Presented in text and map form

Self-archiving permissions advisory services

SHERPA RoMEO

http://www.sherpa.ac.uk/romeo/

Provides a search-by-publisher and search-by-journal service detailing what conditions of self-archiving the publisher allows and the publisher's compliance with individual funder OA policies. Managed by the SHERPA Project at the University of Nottingham.

EPrints RoMEO

http://romeo.eprints.org/

Provides a search-by-publisher and search-by-journal service detailing what conditions of self-archiving the publisher allows. Managed by EPrints at the University of Southampton.

OAK List

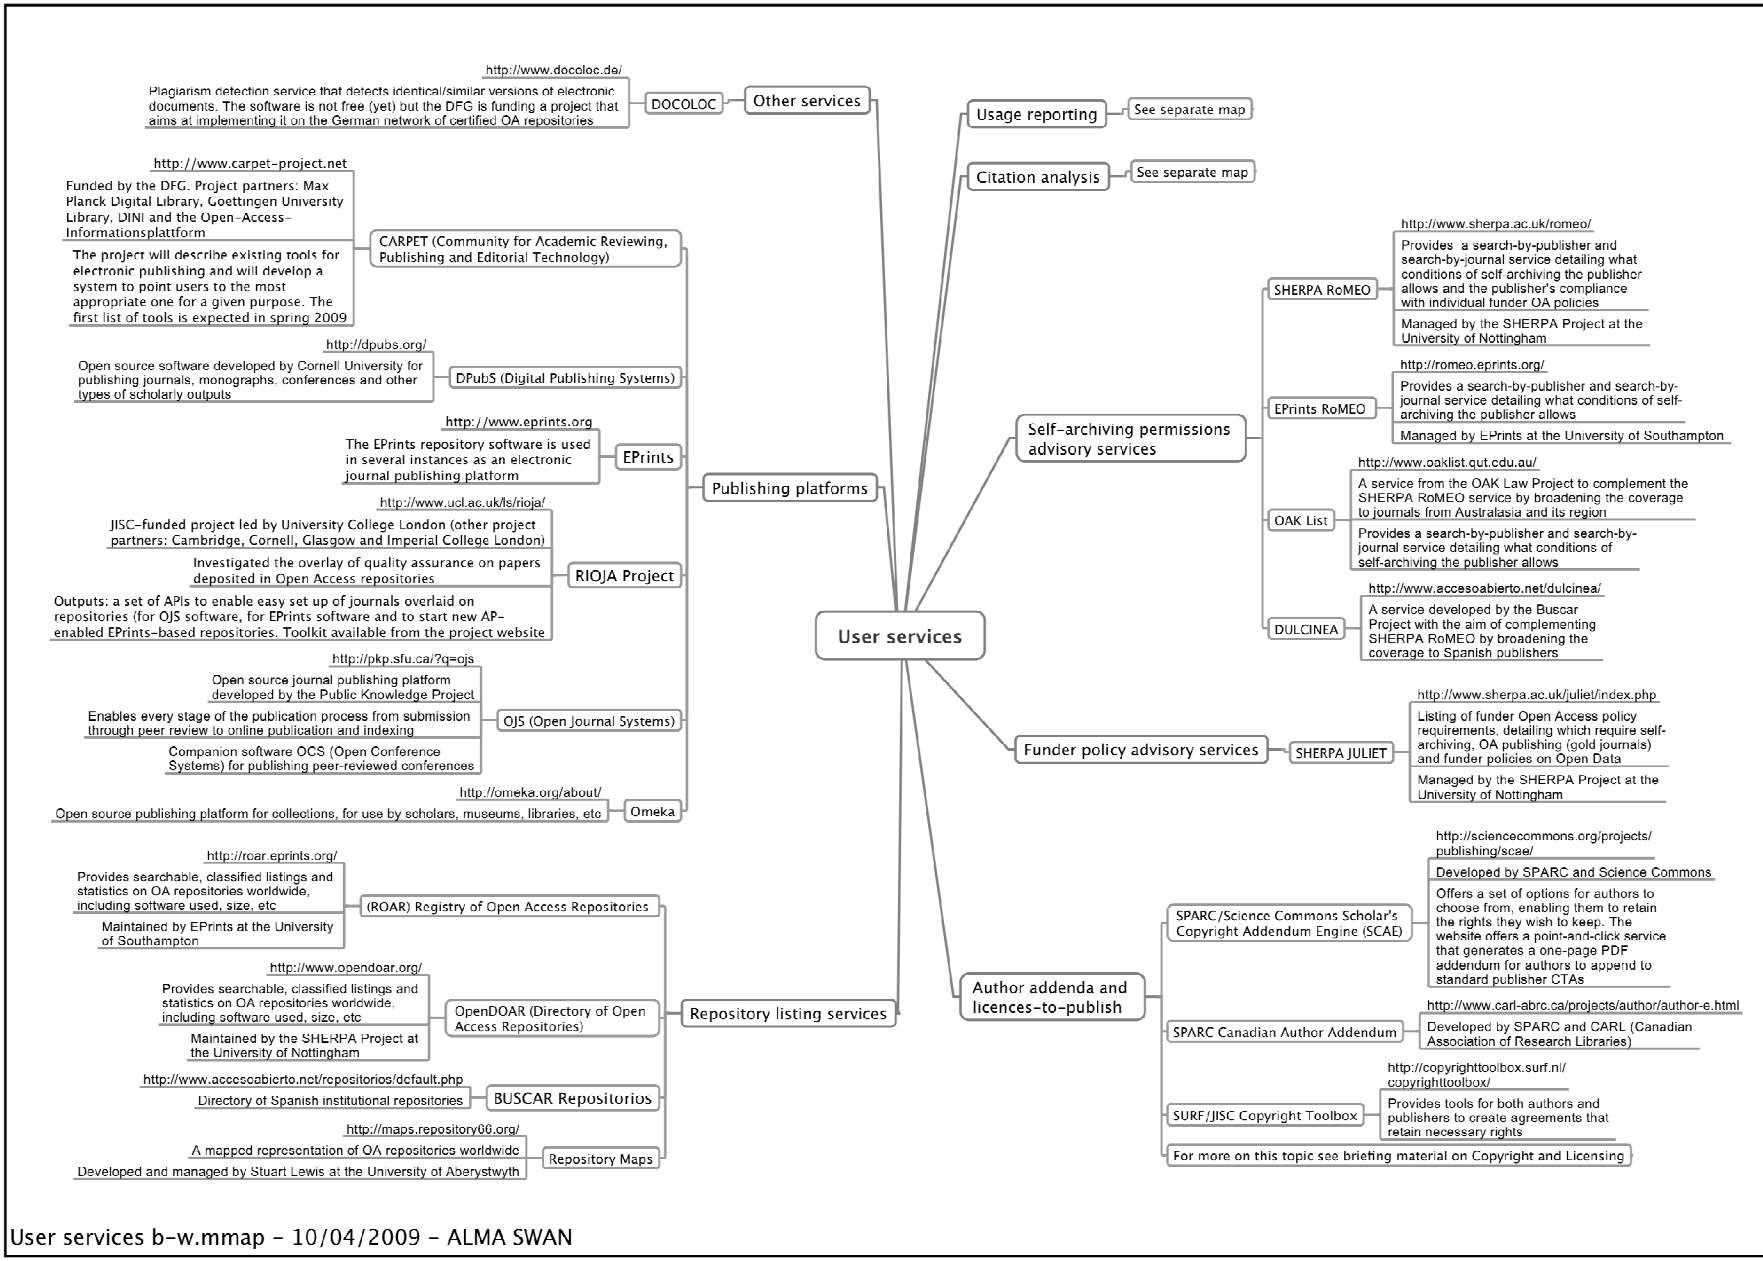
http://www.oaklist.qut.edu.au/

A service from the OAK Law Project to complement SHERPA RoMEO by broadening the coverage to journals from Australasia and its region. Provides a search-by-publisher and search-by-journal service detailing what conditions of self-archiving the publisher allows.

DULCINEA

http://www.accesoabierto.net/dulcinea/

A service developed by the Buscar Project with the aim of complementing SHERPA RoMEO by broadening the coverage to Spanish publishers.



User services b-w.mmap - 10/04/2009 - ALMA SWAN

Action plans

- Four topics developed from the wiki discussions as areas for future action:
  - Citation services
  - ‘Repository handshake’ (deposit systems)
  - Interoperable identification infrastructure (people, places, things)
  - Repository organisation (international infrastructure to support repositories)
- Presentations on these at the end of this session

What was distilled OUT?

- Necessarily, topics and issues were lost along the way in this refining work
- Specific things, e.g:
  - usage reporting
  - tagging systems
  - authoring environments
  - preservation tools
- General things, e.g:
  - ORE approaches
  - linking data
- What further ideas/suggestions can you propose?

Taking things forward

- We have the current action plans, now:
- What should we bear in mind?
- How best to coordinate the work?
- Who should be involved?
- Why and how?
- Can you help us?
