## **A review of scalar field cosmology: Its non-linear Schrodinger-type formulation**

*Thursday 25 May 2017 17:45 (15 minutes)*

Standard cosmological model containing barotropic fluid in arbitrary spatial curvature and scalar field under arbitrary potential can be described in the form of non-linear Schrödinger (NLS) formulation. The formulation leads to the simpler way in obtaining exact scalar field solutions. NLS may be useful for interpretation of wave function in quantum cosmology.
