## **Characterization of Ag doped WO<sub>3</sub> synthesized by electrospinning**

*Wednesday, 24 May 2017 15:45 (15 minutes)*

SEM technique was assisted to selected the best condition of 5 wt% Ag doped WO<sub>3</sub> nanofiber which synthesized by electrospinning method and calcined at 550 °C for 2 hours then were investigated the characteristic via X-ray diffraction, Raman spectroscopy, photoluminescence, UV-visible, FTIR and TEM technique. The results show that is product of orthorhombic Ag-WO<sub>3</sub> nanofiber with 60 nm diameter and 2.53 eV photon energy gap semiconductor.
