

Internationalization and Localization in Python

Monday 30 May 2016 14:15 (15 minutes)

Internationalization and Localization are increasingly important in an interconnected world. Regardless of that, developers tend to treat them as secondary issues, very often choosing to address them properly when it's already too late. The fact that most programming language standard libraries choose to ignore the matter doesn't help either.

In this talk we will present some useful Python libraries and tools that can help you internationalize and localize your code with minimal effort. We will also describe some common pitfalls and problems.

Talk Length

15 minutes
