

# Material Example

The material is either submitted in form of simple plots or as standard talk

If it is a talk, the session convenor can pick some plots or other useful things to include it in the discussion session (encouraged) or can decide get part of the material to be presented (discouraged because

of the overhead to change Pdf-files)

In any case it is encouraged that main contributor to a slide or topic presents it (even, if it is included in the discussion session slide)
