The weak production and strong decays of D-wave charmonia

Tuesday 10 May 2016 18:00 (15 minutes)

We will talk about the production of D-wave charmonia (2^{--+} , 2^{---} , 3^{---}) in the weak decays of B_c meson. The wave functions of the heavy mesons are achieved by solving the instantaneous Bethe-Salpeter equation. The three-gluon decay processes of these charmonia are also investigated.

Summary

Authors: Prof. WANG, Guoli (Harbin Institute of Technology); Dr LI, Qiang (Harbin Institute of Technology); Dr WANG, Tianhong (Harbin Institute of Technology)

Co-authors: Dr YUAN, Han (Harbin Institute of Technology); Dr JIANG, Yue (Harbin Institute of Technology)

Presenter: Dr WANG, Tianhong (Harbin Institute of Technology)

Session Classification: Heavy Flavor
