

## Update from the workshop

- Strong interest in testing and prototyping novel ideas and concepts in various labs
- Need for spreading the knowledge regarding accessible labs (laser & accelerator) within Europe + partner countries has been acknowledged –have a good list already but we can expand it
- Collaborations may be able to make use of existing networks (eg. Laserlab)
- There are several labs outside the network as well with unique capabilities (DESY-LUX, FLAME @ SPARC-LAB, ILIL-CNR)

## Key tasks for the next year

- (1) Request brief write-up from participants regarding laser and accelerator facilities (July/August)
- (2) Form a section on the webpage regarding facilities where tests can be conducted (October/November)
- (3) Form another section on the webpage regarding the progress in various work packages (November/December)
- (4) Approach these facilities on behalf of EuPRAXIA regarding the best method for access (Next FY)
