MEMS Sensors: Enabler for the IoT

Tuesday, 27 September 2016 09:00 (40 minutes)

Consumer electronics focus on low cost, small size, low power consumption and overall system performance. This leads to combined multi-axis sensing structures, integrated power management schemes and sensor data fusion. Bosch is actively driving this evolution further with novel multiple sensors on one single chip which will become the key element for new IoT applications.

Presenter: GOMEZ, Udo-Martin (Bosch Sensortec GmbH)

Session Classification: Invited Talk
