

FLASY 2016: 6th Workshop on Flavour Symmetries and Consequences in Accelerators and Cosmology

Wednesday, 28 September 2016 - Friday, 30 September 2016

Valparaiso

Book of Abstracts

Contents

Registration and Coffee	1
Welcome Speech	1
Particle physics landscape 2016	1
Radiative neutrino mass models and flavour violation	1
Lepton number violation, neutrino masses and LHC	1
Distinguishing Majorana vs. Dirac sterile neutrinos lighter than MW at the LHC	1
Testing low-scale neutrino mass models	1
Sterile Neutrino Oscillations with Altered Dispersion Relations	1
LHC limits on double beta decay	2
Reactor antineutrinos overview	2
Prospects for Charged Higgs Discovery at Colliders	2
Light charged Higgs boson scenario in multi Higgs doublet models.	2
Higgs Triplet Models	2
Prediction of Leptonic CP phase and Discrete Symmetry	2
3HDM based on order-4 CP symmetry	2
Gauge U(1) Family Symmetries of Quarks and Leptons	3
The reduced MSSM and its predictions.	3
Anomalous Semi-leptonic B Decays and New flavor Physics	3
WIMP dark matter in a Two-loop Dirac neutrino mass mechanism	3
Neutrino Mass Matrix with Occam's Razor and the Sign of Universe's Baryon Asymmetry	3
A gauge explanation for the B-meson anomalies	3
CP violation in $h \rightarrow \tau + \tau$ and LFV in $h \rightarrow \mu + \tau$	3
B-meson decays with produced on-shell sterile neutrinos and D^* -mesons	3

Two viable models of SM fermion mass generation	4
Radiative Type III Seesaw Model and its collider phenomenology	4
QCD running in neutrinoless double beta decay	4
Effective Majorana neutrino phenomenology	4
Generating Deviations to Tribimaximal Mixing from Sterile neutrinos	4
Light sterile neutrino sensitivity of ^{163}Ho experiments	4
Fermion dark matter from SO(10) GUTs	4
Mass limit for light flavon and collider physics	5
Type II leptogenesis	5
Simplified Dark Matter with Flavour	5
Predictive SUSY flavour GUTs and the new precision analysis tool SusyTC	5
Testing dark matter with anomalous magnetic moment	5
Simplified models for Dark Matter meet their consistent completions	5
Collider and Dark Matter Searches in the Inert Doublet Model from Peccei-Quinn Symmetry.	5
Minimal dark matter and neutrino masses	5
Warped flavor symmetry predictions for neutrino physics	6
Scotogenic Models and Radiative Z2 Symmetry Breaking	6
Gravitational Wave Instabilities in the Cosmic Neutrino Background	6

Registration and Coffee

22

Welcome Speech

23

Particle physics landscape 2016

24

Radiative neutrino mass models and flavour violation

25

Lepton number violation, neutrino masses and LHC

26

Distinguishing Majorana vs. Dirac sterile neutrinos lighter than MW at the LHC

27

Testing low-scale neutrino mass models

28

Sterile Neutrino Oscillations with Altered Dispersion Relations

29

LHC limits on double beta decay

30

Reactor antineutrinos overview

31

Prospects for Charged Higgs Discovery at Colliders

32

Light charged Higgs boson scenario in multi Higgs doublet models.

33

Higgs Triplet Models

34

Prediction of Leptonic CP phase and Discrete Symmetry

35

3HDM based on order-4 CP symmetry

36

Gauge U(1) Family Symmetries of Quarks and Leptons

37

The reduced MSSM and its predictions.

38

Anomalous Semi-leptonic B Decays and New flavor Physics

39

WIMP dark matter in a Two-loop Dirac neutrino mass mechanism

40

Neutrino Mass Matrix with Occam's Razor and the Sign of Universe's Baryon Asymmetry

41

A gauge explanation for the B-meson anomalies

42

CP violation in $h \rightarrow \tau + \tau$ and LFV in $h \rightarrow \mu + \tau$

43

B-meson decays with produced on-shell sterile neutrinos and D^* -mesons

44

Two viable models of SM fermion mass generation

45

Radiative Type III Seesaw Model and its collider phenomenology

46

QCD running in neutrinoless double beta decay

47

Effective Majorana neutrino phenomenology

48

Generating Deviations to Tribimaximal Mixing from Sterile neutrinos

49

Light sterile neutrino sensitivity of ^{163}Ho experiments

50

Fermion dark matter from $\text{SO}(10)$ GUTs

51

Mass limit for light flavon and collider physics

52

Type II leptogenesis

53

Simplified Dark Matter with Flavour

54

**Predictive SUSY flavour GUTs and the new precision analysis tool
SusyTC**

55

Testing dark matter with anomalous magnetic moment

56

**Simplified models for Dark Matter meet their consistent comple-
tions**

57

**Collider and Dark Matter Searches in the Inert Doublet Model
from Peccei-Quinn Symmetry.**

58

Minimal dark matter and neutrino masses

59

Warped flavor symmetry predictions for neutrino physics

60

Scotogenic Models and Radiative Z_2 Symmetry Breaking

61

Gravitational Wave Instabilities in the Cosmic Neutrino Background
