

Student Projects AEPSHEP 2016

– introduction –

Martijn Mulders (CERN)

Sunday October 23

12:30	--- Lunch ---	12:30	--- Lunch + Free Time ---	12:30	--- Lunch + Free Time ---
13:30	 Half-Day Excursion (until 19:00) ()	15:30	Quarkonium Physics 1 - Jungil Lee (Korea University) ()	15:30	Quarkonium Physics 2 - Jungil Lee (Korea University) ()
19:00	--- Dinner ---	17:00	--- Coffee Break ---	17:00	--- Coffee Break ---
		17:30	 Discussion Session (until 18:45) ()	17:30	 Discussion Session (until 18:45) ()
		19:00	--- Dinner ---	19:00	--- Dinner ---
		20:30	 Student Projects (until 22:30) ()	20:30	 Farewell Party (until 23:30) ()

Each Discussion Group:

- Choose one experimental paper, (to be) published in a refereed journal
- Study and understand in detail all aspects of the analysis described in the paper (trigger, selection, backgrounds, statistical analysis, systematic uncertainties, theoretical interpretation... etc). Follow up references and make use of relevant public-domain material; don't hesitate to ask questions..!
- Prepare a 15-minute presentation of your group's study, to be presented by one student from your group, on Sunday October 23 after dinner
- The order of the talks will be random and there will be a prize for the best presentation, determined by you (1 vote per group)

Further guidelines:

- It is probably better to choose a longer article than a short letter – **at least 10 pages** of content, not counting abstract, references and author list
- Once you have chosen a paper, **let me know**
- We can provide **paper copies** (for your group) of the paper you select
- You can use **some** time during the discussion sessions to get organized, but most of the work should happen **during free time**
- Work as a team to decide on a paper, plan and share the work, review progress regularly, combine the contributions, select a speaker to represent you, organize a rehearsal of the talk...
- It is a student project: the DL may guide occasionally, but it is up to you as a team to select the paper, share the work, monitor progress, and elect the speaker

Group 1

Group 2

Group 3

Group 4

Group 5

1. Searches at the LHC

2. SM measurements
at a collider

3. Flavour physics

4. Heavy Ion physics

5. Neutrino physics

Enjoy the project!
