OSG Plans wrt WLCG Installed Capacity Reporting

Feb, 2009

Ruth Pordes
OSG Executive Director

- OSG, US ATLAS and US CMS appreciate the additional 6 weeks for comment and review of the document.
- We sign off on the WLCG Installed Capacity Document V1.8

Plans:

- OSG will report capacity as agreed to in the current WLCG MOU resource commitments, not beyond.
- The monthly reporting information will be transmitted from the OSG from OSG-Operations specifically to the report collectors (APEL, etc)
 - The mechanisms will be similar to those existing for the OSG reporting of accounting and availability information.
 - The reporting will Not be through the WLCG BDIIs used by the resource brokers and workload management systems

-
- We plan to participate in joint activities for
 - a) planning the timeline and steps needed for deployment, analysis and validation of the information at the WLCG and
 - b) ongoing validation of the information.

Is Flavia the contact for both of these these?

- We expect there to be a several month (3-4) window where the information is included in Alberto's reports, there is focused and detailed validation, and the information is not reported at a higher level than the MB.
 - We plan to implement a means to fix data at the OSG management layer rather than going back to the site administrators.
 - With April 2009 as the time of the "Apel/cesga" reports then July 2009 would be the timeframe for the reports to be published officially.
