European FP7 Project for Quattor

Friday 13 March 2009 09:00 (30 minutes)

Although the community is doing a good job in maintaining the quattor toolkit, the community lacks resources to expand, streamline, and document it. This fall there will be an FP7 Infrastructures call related to software for the European Grid Infrastructure. This scope of this call will include more than just the gLite middleware and will likely have an explict reference to deployment and management of grid services. Support gained from such a project would allow us to dedicate effort to improve significantly the toolkit. This discussion is to determine if there is interest in submitting such a proposal and if so, what the program of work should be.
