NCM Component Updates

Thursday 12 March 2009 11:30 (45 minutes)

A review of changes to core components over the last 6 months.

Morgan Stanley: we've made a number of enhancements to some core components. Many of these patches have now been submitted back into the trunk. This talk runs through the status of the changes to illustrate what new features are available with the cron, download and rootpw components, and the ccm, spma and ncm-ncd subsystems, and to get feedback on a couple of proposals: subclassing components and component status tracking (for testing if a configuration is up-to-date).
