

Welcome from the conveners

- **Welcome to our 4th meeting!**
- At this stage, we are going to
 - Review the progress done in last months.
 - You will note that we have many CMS contributions this time, coming from their Physics TDR.
 - Understand where we are.
 - Some 60-70% of the contributions expected for the yellow report have been received, others are coming, as are the introductions to the subgroup sections.
 - We should understand what else is missing, which we can expect to get in the next few weeks; how to ensure that the current collection of individual contributions becomes a coherent document; how to manage (and improve) the connections with the other WGs.

Agenda

Mostly:

- SUSY this afternoon
- Top tomorrow morning
- Non-SUSY tomorrow afternoon

Watch out for exceptions (i.e. the talk from Hinchliffe tomorrow morning, on SUSY LFV with ATLAS).

This afternoon: meeting of the subgroup conveners, mostly to discuss the structure of the report.

Tomorrow afternoon: a discussion with WG2 on tools and benchmarks – how can we improve the connection between LHC and low-pt studies?
