Data format

- New: finally figured out how to convert *.seq → raw A/D count → temperature → *.root (so excited!!!)
- We can now do it on any machine (I am working on Mac for it) ⇒ will write a readme.

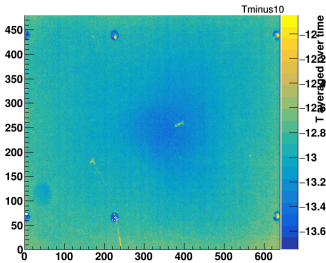

from CSV, $T = -20^{\circ}\text{C}$

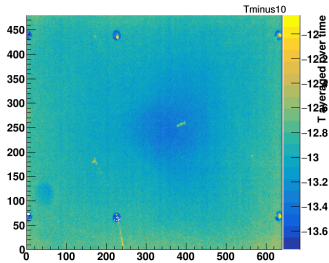

from Seq, $T = -20^{\circ}\text{C}$

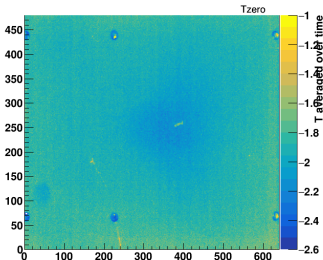

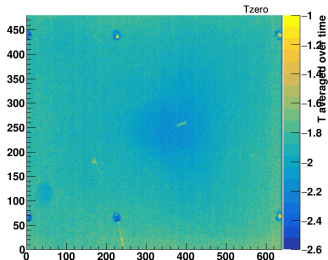

from CSV, $T = -10^{\circ}\text{C}$

from Seq, $T = -10^{\circ}\text{C}$

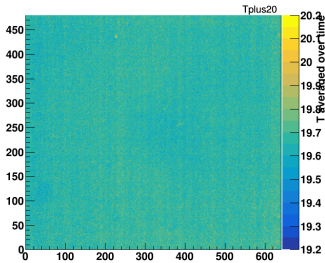

from CSV, $T = 0^{\circ}\text{C}$

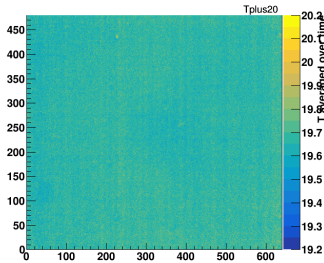

from Seq, $T = 0^{\circ}\text{C}$

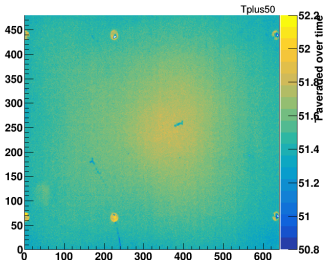

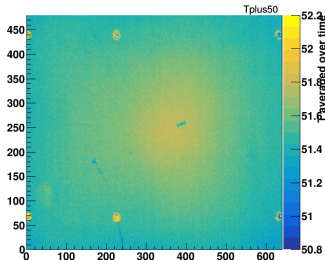

from CSV, $T = 20^\circ\text{C}$

from Seq, $T = 20^\circ\text{C}$

from CSV, $T = 50^\circ\text{C}$

from Seq, $T = 50^\circ\text{C}$
