

Latest Results of the Cosmic-Ray Anisotropy with Energy >57 EeV Observed by the Surface Detector of the Telescope Array Experiment

Tuesday, 11 October 2016 15:40 (30 minutes)

The Telescope Array Experiment has observed a cluster of the UHECRs, called the Hotspot, with $E > 57$ EeV around Ursa Major (Abbasi et al., ApJ, 790, L21) using the first five years of data by the TA surface detectors. In this work, we will report on an update of this result using the latest data collected by the TA surface detectors.

Presentation type

poster

Primary author: KAWATA, Kazumasa

Co-authors: IKEDA, Daisuke (Institute for Cosmic Ray Research, University of Tokyo); KIDO, Eiji; SAGAWA, Hiroyuki (University of Tokyo); Dr TKACHEV, Igor (Institute for Nuclear Research of the Russian Academy of Sciences); TINYAKOV, Peter (Universite Libre de Bruxelles (ULB)); TAKEISHI, Ryuji (ICRR Univ. Tokyo); NONAKA, Toshiyuki (Institute for Cosmic Ray Research University of Tokyo)

Presenter: KAWATA, Kazumasa

Session Classification: Poster session
