Deployment of 2016 resources

- Deployment plans:

→ **CPU (56.4 kHS06):** 2016 resources available since Jan. 2016

[new equipments in production, immersed in oil]

→ **DISK (5.05 PB):** 2016 resources already available for ATLAS and LHCb.

2016 resources for CMS will be available on 22nd March.

[pools have finite size: ATLAS (-23 TiB), CMS (+26 TiB), LHCb (-33 TiB), w.r.t. pledges]

→ **TAPE (12.7 PB):** We planned to have T10KD-ATLAS, T10KC-CMS, and LT05-LHCb.

LHCb has already the 2016 pledge available for tape.

Incident w/T10KD → using T10KC for ATLAS.

[New tender for more T10K tapes – maybe not in time for 1st April]

- Impact on operations:

→ **None** – transparent for the VOs

- Expected delays:

→ **Tape:** some delay for ATLAS and CMS (not critical, as tape is filled along the year)

Installed today: ATLAS 4.8 PB (-1.11 PB pledge), CMS 4.8 PB (-0.3 PB pledge)
