

# CBM First-level Event Selector FLES

## FLES: Central physics selection system for CBM

- HPC processor farm with FPGAs, GPUs and fast interconnect
- $>1$  TByte/s input data stream
- High-throughput event building
- Online analysis using fast, vectorized many-core track reconstruction algorithms

Detector

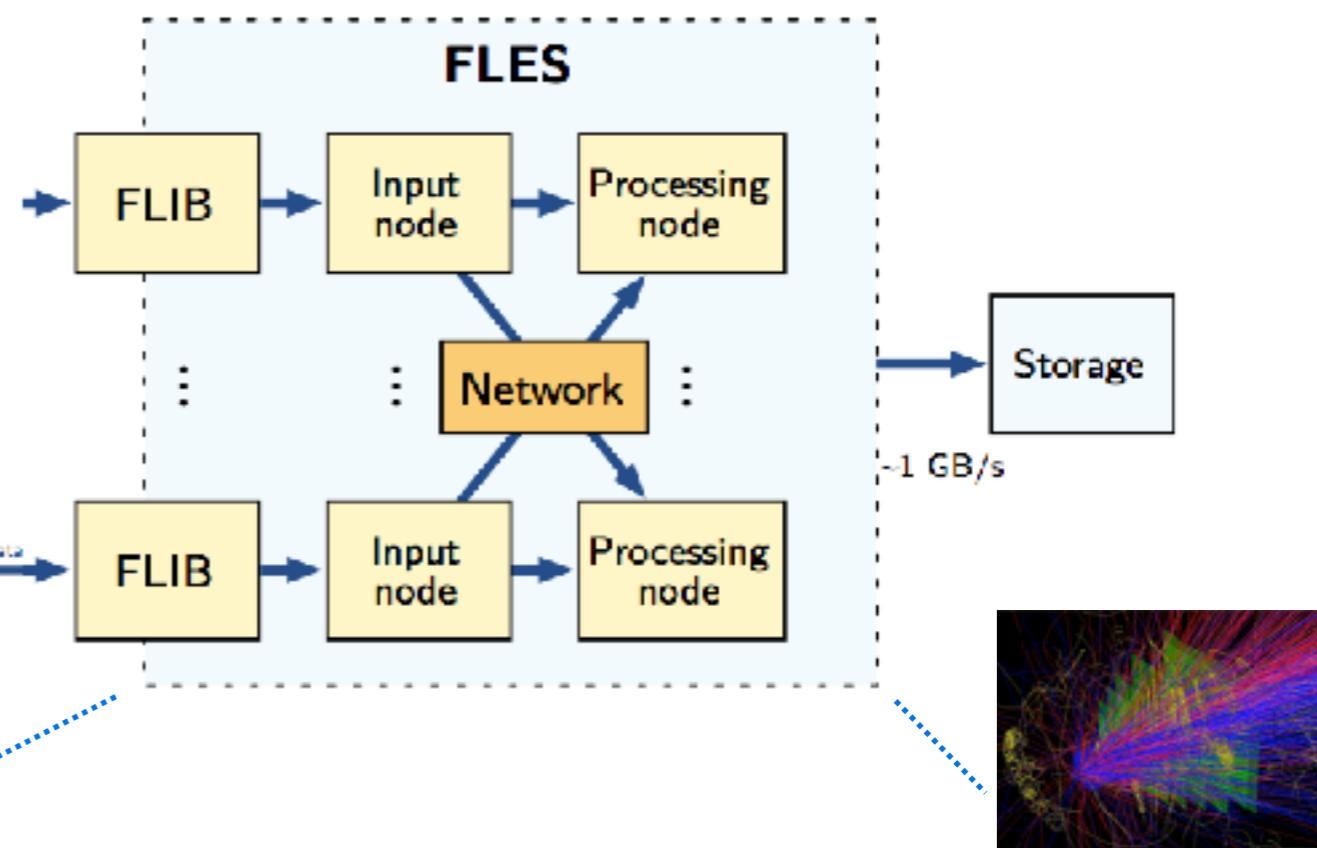

- $10^7$  events/s
- Self-triggering front-end
- Data push readout
- Complex global triggers

- **High-throughput event building** (InfiniBand)
- $>1$  TByte/s input data rate
- $\sim 1000$  input nodes
- $\sim 60.000$  cores

## Status

- Demonstrator implementation available
- Data chain field-tested in beam tests

- **Online event selection**
- 4-D tracking
- Identification of leptons and hadrons
- High-precision vertex reconstruction
