

PaaS for web applications with OpenShift Origin

Thursday, 13 October 2016 15:30 (15 minutes)

The CERN Web Frameworks team has deployed OpenShift Origin to facilitate deployment of web applications and improve resource efficiency. OpenShift leverages Docker containers and Kubernetes orchestration to provide a Platform-as-a-service solution oriented for web applications. We will review use cases and how OpenShift was integrated with other services such as source control, web site management and authentication services.
