

- Cloud Area Padova: OpenStack based Cloud with resources spread among two sites
- Production service
 - ~ 1100 cores, ~ 40 TB
 - 90+ users, ~ 25 projects, using the Cloud in different ways (interactive, batch, deployment of services)
 - also integrated some in-house developments
- Not so straightforward to use in production a software still evolving very quickly
 - several lessons learnt, some choices had to be revised
- Planned integration with the Synergy service, for an efficient usage of resources, without static partitioning
