

How Pre-Commercial Procurement can fund innovative cloud services

Thursday, 13 October 2016 16:30 (15 minutes)

The HELIX NEBULA Science Cloud (HNSciCloud) project (presented in general by another contribution) is run by a consortium of ten procurers and two other partners; it is funded partly by the European Commission, has a total volume of 5.5 MEUR and runs from January 2016 to June 2018. By its nature as a pre-commercial procurement (PCP) project, it addresses needs that are not covered by any commercially available solution yet. The contribution will explain the steps, including administrative and legal ones, needed to establish and conduct the project, and will describe the procurers' experience with the project.

Tertiary Keyword (Optional)

Experience/plans from outside experimental HEP/NP

Secondary Keyword (Optional)

Computing models

Primary Keyword (Mandatory)

Cloud technologies

Primary author: MEINHARD, Helge (CERN)

Presenter: MEINHARD, Helge (CERN)

Session Classification: Posters B / Break

Track Classification: Track 3: Distributed Computing
