- UK GridPP has been planning how to reduce management for Tier2 Storage (And Sites)

- We have identified 4 "classes" of approach for this, with keywords ("Barebones", "Egalitarian", "Network" and "Cache")

- Research active on Network and Cache in collaboration with mostly ATLAS VO.

- We recommend low-hanging fruit - moving to ZFS for disk server provisioning eg.

- We recommend simplification - remove SRM, provide only one, maybe 2 protocols [we prefer http, gridftp].
