

# Contribution Summary Pages (1 pg., 2 pg. in special cases)

- Name and location of experiment/project
- Number (can be rough) of members and collaborating institutions
- Primary physics goals
- Summary of the experimental approach and setup
- Summary of existing and future physics results
- A plot (or two) that summarizes the experimental sensitivity and/or concept
- Future plans, if known (5 year outlook)

If this can be given in LaTeX form (to conveners & organizers), that is best. Otherwise, plain text can work if it's simple. Importantly, it should *\*not\** require a lot of editing.
