

Discussion on SW Review

A. Salzburger (CERN), E. Moyse (Umass)

Questions on SW review (1)

- ▶ Did we/the groups learn how to move to the new framework ?
 - did it set a different direction for any domain ?
- ▶ What do we do with the areas of concern ?
 - manpower: single point of failures / only one expert
 - problematic code: did we start the right actions (e.g. conditions access in pixels) ?
- ▶ Will this lead to new coding guidelines ?
 - developers guide ?
- ▶ Do we also need a detailed code review ?
 - i.e. a locally organised (per domain) clean-up (again) ?
 - dos and no-dos ?
- ▶ Review done - What now ?

Questions on SW review (2)

- ▶ How do other experiments teach newcomers ?
- ▶ Code quality:
 - how can we use tools to improve the code quality ?
 - and how can we build that into our data flow ?
- ▶ Copying code :
 - how to guide to copy “good code” rather than “bad code”
