

Operational Experience with the CMS Pixel Detectors

Monday 15 February 2010 16:35 (25 minutes)

The Pixel Detectors of the CMS experiment were installed and commissioned in the Summer and fall of 2008, removed, repaired and reinstalled in the Spring of 2009 and recommissioned in the Summer of 2009 in preparation for beam. The performance of the pixel detector during the fall of 2009 with 450 GeV/c and 1.18 TeV/c circulating beams in the LHC will be discussed.
