## Pros and cons of EFT interpretation of multiboson production at LHC

*Friday 19 May 2017 15:32 (20 minutes)*

A discussion of the conditions for an effective field theory (EFT) to give an adequate low-energy description of an underlying physics beyond the Standard Model and how experimental results for multi-boson production could be reported, so that they admit a maximally broad range of theoretical interpretations in a wide range of energy scales. The talk should also include a discussion on global EFT analyses of Higgs + TGC data.

**Presenter:** GONZALEZ ALONSO, Martin (Universite Claude Bernard-Lyon I (FR))
