Operation scenarios for 2009 - all beams required in 2009

Wednesday, 4 March 2009 09:40 (30 minutes)

2009 will be a very challenging year for the CERN accelerator complex. The clear priority will be the LHC with a run through the winter into 2010 scheduled. The implications of this are discussed. The complex will also have to deliver beam in the normal physics schedule to a plethora of other clients. These clients are enumerated and their required beam is detailed. The machine development strategy for the year is elucidated.

Presenter: LAMONT, Mike

Session Classification: Session 1 - Operation in 2008 and outlook for 2009
