dear all,

first of all apologies for the poor connection yesterday and the abrupt ending of the meeting. A short summary of main actions and of work to be done online follows.

-- the NUFAC16 announcements to all contacts mentioned have been sent, if you don't hear about NUFAC16 within the next few days and think you should please feel free to act -- just let us know.

-- As far as the plenary sessions are concerned:  
we have now compiled the suggestions of the working groups (not all were given on the same day and this got us confused),  
and will send around a more elaborate version of the program that takes into account these proposals in about a week. (Please remember that what has been distributed so far is a straw-man program, which is obviously in no way official -- please do not make premature announcements!). A bit of arithmetic reveals that in order to fit in the plenary session time we will have to make some cuts and/or groupings.

-- round table panelists are being invited as well as the neutrino Nobel Prizes

-- the poster will be distributed soon for checking

-- we see that the WG conveners are engaged in setting up joined sessions, this is great. We will assemble this part after the first return on abstracts.

-- let us know of anything we forgot to record.

kind regards,

Alain, Jacques, Takashi
