

# Introduction

ACTS developers meeting

2016-05-10

# Failed build jobs

- recently had problems with failed build jobs
  - only affecting merge requests (still quite bad)
  - turns out to be a problem in some jenkins plugins
  - fix is expected this week
  - disabled builds for merge requests at the moment  
==> thoroughly test your changes locally

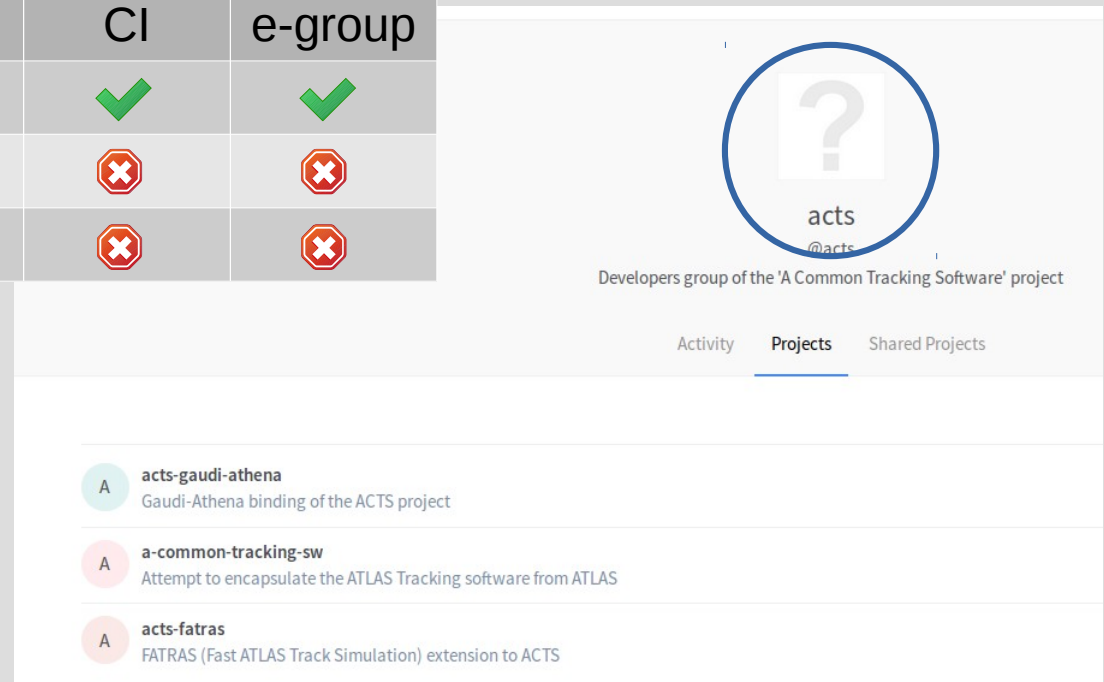

# ACTS package family

- the family of ACTS packages is growing

	GitLab	JIRA	CI	e-group
ACTS	✓	✓	✓	✓
ACTS-gaudi-athena	✓	✓	✗	✗
ACTS-Fatras	✓	✓	✗	✗

CI for ACTS-gaudi-athena should probably be done in the test environment of the framework  
=> would be nice to get a MIG nightly (in the future) to test migration of ATLAS tracking to ACTS

## Logo contest?

The screenshot shows the GitHub organization page for 'acts'. The organization name is 'acts' with the handle '@acts'. Below the name, it says 'Developers group of the 'A Common Tracking Software' project'. There are three tabs: 'Activity', 'Projects', and 'Shared Projects'. The 'Projects' tab is selected. Below the tabs, there are three project entries:

- acts-gaudi-athena**: Gaudi-Athena binding of the ACTS project
- a-common-tracking-sw**: Attempt to encapsulate the ATLAS Tracking software from ATLAS
- acts-fatras**: FATRAS (Fast ATLAS Track Simulation) extension to ACTS

**ACTS is a dependency for other packages**  
**=> need to reach some level of code stability**  
**=> think about deployment**
